Docker Advance training

After completion of two days docker administration and operations training, participants will also be able to perform the basic tasks needed to get started with Docker and integrate it into your working environment.

You will then transition into the Advanced Docker Topics modules and learn to use Docker to control the Docker daemon, Setup a secure environment for Docker containers and use Docker Machine, Swarm, and Compose for orchestration tasks including emphasis on Docker's commercial offerings for the enterprise. On completion of the final two days of training, participants will be able to:

- **Control the Docker daemon**

- **Configure security and TLS**

- **Run applications on multiple containers across multiple host machines**

- **Enable Docker Content Trust**

- **Set up a registry and understand the Docker Trusted Registry**

- **Use Docker Machine, Swarm, and Compose**

- **Build micro service applications**
