Advanced MariaDB for High Availability and Performance :

Introduction

Installing and configuring MariaDB

Overview of MariaDB architecture

Backing up and restoring MariaDB

Point-in-Time-Recovery (PiTR)

Securing MariaDB

Configuring MariaDB for high availability

Master-slave replication

Master-master replication

Setting up virtual IPs

Read/write distribution

Active-active clustering with Galera Cluster

Load balancing

Performance tuning in MariaDB

Hardware and performance

Schema tuning

Indexing

SQL query Tuning

Profiling
