

Administering System Center Configuration Manager 2016

Configure and Maintain a Configuration Manager Management Infrastructure (35-40%)

- Configure the management infrastructure to support clients and devices
 - This objective may include but is not limited to: Configure boundaries and boundary groups; configure Active Directory discovery methods; create a device collection; create a user collection; configure a maintenance window; configure resource discovery; configure mobile device management using the Exchange Server connector; organize resources by using device and user collections.
- Configure the management infrastructure to distribute content
 - This objective may include but is not limited to: Install a new distribution point; manage content distribution; relationships, prepare the infrastructure for content management; distribute and manage content on distribution points.
- Configure the management infrastructure to use queries and reports
 - This objective may include but is not limited to: Configure Microsoft SQL Server Reporting Services (SSRS); create data queries; create subselect queries; create status message queries; configure a reporting services point; deploy and configure a Data Warehouse service point; create a report by using Report Builder; create and configure data and status message queries.
- Configure the management infrastructure to deploy operating systems
 - This objective may include but is not limited to: Prepare the site for operating system deployment; manage the site system roles used to support operating system deployments.
- Maintain the management infrastructure
 - This objective may include but is not limited to: Configure role-based administration; configure scopes; configure administrative users; configure the Remote Tools client settings and permissions; manage desktops by using remote control; maintain a Configuration Manager site; configure maintenance tasks in Configuration Manager; configure the Backup Site Server maintenance task; recover a site from a backup; perform Configuration Manager site maintenance tasks; back up and recover a Configuration Manager site; monitor the site and component status; review log files by using the Configuration Manager Trace Log tool.

Manage Inventory by Using Configuration Manager (10-15%)

- Deploy and manage the Configuration Manager client
 - This objective may include but is not limited to: Prepare the site for client installation; deploy the Configuration Manager client software by using client push installation; manage client settings; configure and monitor the client status; configure and monitor client health.

- Configure and manage inventory collection
 - This objective may include but is not limited to: Configure and manage the hardware inventory; configure software metering; prepare the site for Asset Intelligence; configure and manage Asset Intelligence; monitor license agreements by using Asset Intelligence; review Asset Intelligence reports; manage inventory collection and software metering.

Manage Applications by Using Configuration Manager (15-20%)

- Create and deploy applications
 - This objective may include but is not limited to: Install and configure the Application Catalog roles; create applications that have requirements; deploy applications; deploy PowerShell scripts; manage application supersedence and removal.
- Manage and deploy virtual applications
 - This objective may include but is not limited to: Configure support for Microsoft Application Virtualization (App-V); deploy virtual applications.
- Manage and deploy Microsoft Store apps, Microsoft Store for Business apps, and Microsoft Office 365 apps
 - This objective may include but is not limited to: Configure support for sideloading; configure a Microsoft Store app; sideload an app; deploy Microsoft Store for Business apps; assign Office 365 ProPlus licenses to users; modify Office 365 ProPlus options for manual downloads; configure infrastructure requirements; deploy Office 365 ProPlus; configure software updates to support Office 365, deploying Office 365 packages

Deploy and Maintain Operating Systems by using Configuration Manager (20-25%)

- Deploy operating systems
 - This objective may include but is not limited to: Prepare operating system images; deploy operating system images for bare-metal installation; manage packages to support operating system deployment; create a task sequence to deploy an image; manage Windows as a service; upgrade Analytics by using Microsoft Operations Management Suite (OMS).
- Deploy software updates
 - This objective may include but is not limited to: Configure the site for software updates; configure and synchronize the software update point; determine software update compliance; configure automatic deployment rules; prepare the Configuration Manager site for software updates; evaluate software updates; monitor and troubleshoot software updates.
- Manage compliance and access control
 - This objective may include but is not limited to: Manage configuration items and baselines; view compliance settings and reports; view compliance results; configure remediation in the compliance settings; use compliance information to create collections; configure the compliance settings; manage resource and

data access; manage Device Guard; manage conditional access to the services in Configuration Manager; configure an Endpoint Protection point and client settings; configure, deploy, and manage Endpoint Protection policies; monitor Endpoint Protection; configure Endpoint Protection to detect and remediate malware and security vulnerabilities.

Extend the Management Scope of Configuration Manager (10-15%)

- Implement support for Internet-based clients and devices
 - This objective may include but is not limited to: Implement PKI for site systems and clients; deploy certificates to Configuration Manager; create and export a Microsoft Azure management certificate for cloud-based distribution points; create and configure cloud-based distribution points; configure systems to support Internet-based client management (IBCM); verify the client settings for IBCM; prepare for cloud integration; configure and enable directory syncing; implement a cloud management gateway; manage mobile devices by using the Exchange Server connector; configure security permissions for Microsoft Exchange Server integration; configure the Exchange Server connector; manage mobile devices, Enable co-management for Windows 10 devices, Manage Windows 10 devices using co-management.
- Implement on-premises mobile device management (MDM)
 - This objective may include but is not limited to: Manage mobile devices from an on-premises infrastructure; configure PKI for on-premises MDM; validate and configure prerequisites for on-premises MDM; enroll a standalone Windows 10 device in on-premises MDM as a mobile client.
- Migrating from Hybrid MDM to Intune standalone
 - This objective may include: Import configuration data to Microsoft Intune, prepare Intune for data migration, change the MDM authority for specific users, change the organization to Intune standalone, using the Intune Data Importer tool.
