

<b>Apache Kafka Contents 3 days</b>
<b>1. Getting Started</b>
● Introduction
● Use Cases
● Architecture
● Components of Kafka - Broker, Producer, Consumer, Topic, Partition
● Ecosystem
● Kafka vs Flume
<b>Installing Kafka</b>
First Things First
Installing a Kafka Broker
<b>Broker Configuration</b>
General Broker
<b>Topic Defaults</b>
num.partitions
<a href="#">log.retention.ms</a>
log.retention.bytes
log.segment.bytes
<a href="#">log.segment.ms</a>
message.max.bytes
Hardware Selection
Kafka in the Cloud
<b>Kafka Clusters</b>
How Many Brokers
Broker Configuration
<b>Operating System Tuning</b>
Virtual Memory
Disk
Networking
<b>Production Concerns</b>
Garbage Collector Options
Datacenter Layout
Colocating Applications on Zookeeper
Getting Started With Clients
<b>Best Practices of Kafka on Production</b>
<b>Best Practices of Zookpeer on Production</b>

<b>2. Cluster Setup</b>
● Zookeeper
● Single node kafka
● <b>Hands-On - Setting Up</b>
● Multi node kafka
● <b>Hands-On - Multi Node Setup</b>
● Console Producer & Console Consumer
● <b>Hands-On - Producer &amp; Consumer</b>
● High Availability & Performance
● <b>Considerations for adding only zookeeper node in existing cluster</b>
● <b>Considerations for adding a kafka node in existing cluster</b>
● <b>Considerations for removing only zookeeper node in existing cluster</b>
● <b>Considerations for removing kafka node in existing cluster</b>
<b>Kafka Producers - Writing Messages to Kafka</b>
Producer overview
Constructing a Kafka Producer
Sending a Message to Kafka
<b>Serializers</b>
Custom Serializers
Serializing using Apache Avro
Using Avro records with Kafka
Partitions
<b>Configuring Producers</b>
acks
buffer.memory
compression.type
retries
batch.size
<a href="#">linger.ms</a>
<a href="#">client.id</a>
max.in.flight.requests.per.connection
timeout.ms and metadata.fetch.timeout.ms
Old Producer APIs
<b>4. Detailed Design</b>

● Performance tuning
● Serialization, Compression
● Message Delivery Semantics
● Replication
● Log Compaction
● Quotas
● <b>Hands-On</b>
<b>Kafka Consumers - Reading Data from Kafka</b>
<b>KafkaConsumer Concepts</b>
Consumers and Consumer Groups
Consumer Groups - Partition Rebalance
Creating a Kafka Consumer
Subscribing to Topics
The Poll Loop
<b>Commits and Offsets</b>
Automatic Commit
Commit Current Offset
Asynchronous Commit
Combining Synchronous and Asynchronous commits
Commit Specified Offset
Rebalance Listeners
Seek and Exactly Once Processing
But How Do We Exit?
Deserializers
<b>Configuring Consumers</b>
fetch.min.bytes
<a href="#">fetch.max.wait.ms</a>
max.partition.fetch.bytes
<a href="#">session.timeout.ms</a>
auto.offset.reset
enable.auto.commit
partition.assignment.strategy
<a href="#">client.id</a>
Stand Alone Consumer - Why and How to Use a Consumer without a Group
Older consumer APIs
<b>Kafka Internals</b>

Cluster Membership
Replication
<b>Request Processing</b>
Produce Requests
Fetch Requests
Other Requests
<b>Physical Storage</b>
Partition Allocation
File Management
File Format
Indexes
Compaction
How Compaction Works
Deleted Events
When Are Topics Compacted
<b>Advanced Configuration</b>
● Broker Configs
● <b>Hands-On</b>
● Producer Configs
● Consumer Configs
● Consumer groups
● <b>Hands-On</b>
<b>5. Implementation</b>
● API Design
● Producer and Consumer APIs (Java)
● <b>Hands-On Producer &amp; Consumer API</b>
● Message format
● Log
● <b>Hands-On</b>
<b>6. Operations</b>
● Managing Topics

● Decommissioning nodes
● Data mirroring
● Data centers and Racks
● Monitoring
● Security
● Authorization and ACL
● REST API
● <b>Hands-On</b>
<b>7. Confluent Platform</b>
● Overview
● Confluent Platform vs Apache Kafka
● Kafka Streams
● Kafka Connectors
<b>Confluent Platform Hands On Usecases</b>
<b>8. Kafka UseCases HandsOn</b>
● Millions of Messages per second
How to Handle with Kafka?
IoT HandsOn Usecase
● Kafka with Spark
● <b>Hands-On</b>
● Kafka with Flume (for Hadoop/Hbase/Hive)
● <b>Hands-On</b>
<b>Google Scale Data Handling 100 million messages per sec</b>
