

Symantec NetBackup 7.6 for Windows: Administration

Module 1 Introducing NetBackup

- Introduction to data protection
- The NetBackup environment
- NetBackup concepts
- NetBackup options and agents

Module 2 Installing NetBackup

- Preparing for NetBackup installation and configuration
- Using the pre-installation utility
- Installing your NetBackup environment
- Installing NetBackup clients
- Verifying your NetBackup installation

Module 3 Using the NetBackup Administrative Interfaces

- The NetBackup Administration Console
- NetBackup OpsCenter

Module 4 Configuring Tape Storage and Media

- NetBackup storage concepts
- Configuring tape devices
- Configuring media
- Verifying tape storage

Module 5 Configuring Disk Storage

- Basic NetBackup storage
- Configuring basic NetBackup disk storage
- Configuring AdvancedDisk
- Verifying disk storage
- Additional NetBackup storage concepts

Module 6 Configuring File System Backups

- Introduction to backup policies
- Configuring file system backup policies

Module 7 Performing File System Backups and Restores

- Performing manual backup operations
- Performing restore operations
- Backup and restore job tips

Module 8 Protecting Backup Data

- Backup duplication concepts
- Using Storage Lifecycle Policies
- Introduction to Auto Image Replication
- Introduction to NetBackup Vault

Module 9 Protecting the NetBackup Configuration

- Introduction to NetBackup catalogs
- Managing images
- Performing catalog backup and recovery operations
- Disaster recovery strategies
- Catalog-related tips

Module 10 Monitoring NetBackup

- Monitoring NetBackup jobs
- Monitoring NetBackup activity
- Managing jobs
- Monitoring NetBackup health

Module 11 Managing and Optimizing Tape Storage

- Managing robots and tape drives
- Managing shared tape devices
- Monitoring media and media states
- Managing tapes and media utilization
- Media- and device-related tips

Module 12 Managing and Optimizing Disk Storage

- Comparing disk storage features
- Managing basic disk and DSSU
- Managing AdvancedDisk and disk pools
- Disk-related tips

Module 13 Optimizing File System Backups

- File system backup concepts
- Using incremental backups
- Introduction to file system snapshots
- Using multiple data streams
- Optimizing tape drive performance using multiplexing
- Using synthetic backups
- Using FlashBackup

Module 14 Introduction to Enterprise Backups

- Application protection concepts
- Database backup concepts
- Enterprise application backup concepts
- Virtual machine protection concepts

Module 15 Working with Support

- Support resources
- NetBackup processes, services, and daemons
- Using the nbclogs utility
- Configuring NetBackup debug logging levels
