

Oracle Commerce: Administering Your Content Environment Rel 11.1

Introduction to Your Content Environment

- Overview of Oracle Commerce Content Administration (CA)
- Oracle Commerce tools
- Content Administration architecture
- Key concepts: Project, Workflow, Check-in, Deployment

Configuring Your Content Environment

- Configuring metadata repositories
- Configuring application modules on a CA Server
- Configuring versioned repositories
- Exporting data from non-versioned repositories
- Importing data to versioned repositories
- Viewing repository assets

Setting CA and Merchandising Security Access

- BCC and ACC security
- Merchandising access control
- Secured repositories

Configuring the XML Deployment Topology

- Creating the XML deployment topology
- Importing the topology
- Initializing target sites

Using Workflows

- Asset lifecycle
- Project interactions
- Default workflow

Managing File Assets

- File assets
- Versioned file assets architecture
- Importing existing files using the Repository Loader
- Managing and deploying file assets

Managing Deployment

- How deployment works
- Deployment types and modes
- Selective cache invalidation
- Configuring repositories for deployment
- Direct SQL deployment
- Managing deployments in the BCC

Managing Guided Search and Experience Manager Content

- Guided Search and Experience Manager overview
- Manual and scheduled indexing
- Triggered Indexing
- Content promotion

Viewing Assets Before Production Deployment

- Staging deployment
- One-off deployment targets
- Preview server
- Pros and cons of the different approaches
- Experience Manager preview

Debugging and Troubleshooting Deployment

- Handling rollbacks and recovery
- Debugging failed deployments
- Troubleshooting indexing issues

Appendix A: Single Sign On and Business Tool Links

- Links between the BCC and Workbench
- Single Sign On (SSO) in Oracle Commerce

Appendix B: Site Access Control

- Setting up internal user access control by sites
