

Oracle Identity Governance 12c: Essentials Ed 1

Oracle Identity Governance 12c: Essentials Ed 1

Learn To

In this course, you learn essential concepts about implementing identity management solutions with Oracle Identity Governance.

After, you learn of the importance, benefits, values, terminology, and functional aspects of identity management. Then, you learn about the Identity Governance infrastructure and the suite of Oracle Identity Management products. Next, you learn about the relationship that Oracle Identity Governance has with several Oracle Identity Management products (including Oracle Identity Analytics and Oracle Privileged Account Manager, which, along with Oracle Identity Governance, compose the Oracle Identity Governance Suite). Then, after you learn about the tiers of the Oracle Identity Governance architecture, you learn how to launch Oracle Identity Governance.

Prerequisites

- A general comprehension of Oracle WebLogic Server and Oracle Database
- A high-level understanding of Service Oriented Architecture (SOA), BPEL, and JDeveloper

Audience

- Administrator
- Business Analysts
- Developer
- End Users
- Functional Implementer
- Sales Consultants
- Support Engineer
- Technical Administrator

Course Objectives

- How to provision users to resources through request-level and operation-level approval workflows
- How to provision users to disconnected resources
- Two types of reconciliation workflows: authoritative reconciliation and account reconciliation
- The need for certification and how to configure, create, and complete certification activities
- How to manage authorization policies in Oracle Identity Governance
- The purpose of predefined Oracle Identity Governance connectors, including advantages, best practices, and real-world scenarios for using these connectors
- How to onboard applications using application templates
- Manual and automated provisioning workflows, including how to implement these workflows to create user accounts in external resources manually and automatically
- The importance, benefits, terminology, values, terminology, and functional aspects of identity management

- The Identity Governance infrastructure and the suite of Oracle Identity Management products
- The relationship that Oracle Identity Governance has with several Oracle Identity Management products
- The tiers of the Oracle Identity Governance architecture
- How to launch Oracle Identity Governance
- How to launch Oracle Identity Governance
- How to use the Bulk Load Utility to load users, role categories, and roles into Oracle Identity Governance
- How to customize and save searches

Course Topics

Introducing Oracle Identity Governance 12c

- Product Overview
- Managing Users, User Entities, and Resources
- Handling Reconciliation Workflows
- Managing Security, Reports, and Tools
- Deploying Configurations
- Integrating Oracle Identity Manager

Understanding Identity Management and Identity Governance

- Identity Management
- Identity Governance
- Oracle Identity Management Products
- Oracle Identity Manager Architecture
- Oracle Identity Manager Offerings

Launching Oracle Identity Manager

- Oracle WebLogic Server, Oracle Identity Governance Server, and Oracle SOA Server Overview and comparison
- Oracle Identity Governance Interfaces
- Oracle SOA Interfaces

Understanding Organizations, Roles, and Users

- Oracle Identity Governance Users
- Identity Governance Organizations, Roles, and Entity Relationships
- Bulk Load Utility
- Customizing and Saving Searches

Onboarding Applications

- Oracle Identity Governance Connectors
- Using Oracle Identity Governance Connectors: Setup
- Application Templates
- Bulk Loading Applications using Application Templates

Understanding Application Instances

- Application Instances

Using the Access Request Catalog

- Access Request Catalog
- Managing the Access Request Catalog

Understanding Policy-Based Provisioning

- Resources: Overview
- Assigning Resources: Overview
- Provisioning Resources: Overview

Understanding Advanced Request Functionality

- Understanding Requests
- Understanding SOA Composites
- Understanding Approval Policies

Understanding Application Instances for Disconnected Resources

- Application Instances
- Disconnected Resources

Understanding Reconciliation

- Reconciliation and Provisioning Reconciliation and Provisioning
- Authoritative and Account Reconciliation
- Access Policy Harvesting

Understanding Oracle Identity Governance Security

- Comparing Authorization and Authentication
- Understanding Authorization Policies and Administrative Roles

Managing Reports

- Types of Reports
- Configuring Oracle BI Publisher
- Creating Reports

Understanding Identity Auditor

- Introducing Certification
- Certification Best Practices
- Certification Concepts
- Configuring Certifications
- Managing Certification Definitions
- Understanding Risk Summaries

- Understanding Closed-Loop Remediation
- Creating Certification Reports

Understanding Identity Audit (IDA)

- Segregation of Duties (SoD): Overview
- SoD: Best Practices
- SoD: Workflows
- SoD: Components
- SoD: Authorization
- SoD: Analytics
- SoD: Role Audits
- SoD: Role Approvals

Transferring Oracle Identity Manager Configurations

- Deployment Manager Overview
- Sandbox Overview

Customizing Oracle Identity Manager

- Oracle Identity Manager Interfaces
- Customizing an Interface

Integrating the Oracle Identity Governance Suite

- Oracle Identity Governance Suite
- Integrating the Oracle Identity Governance Suite
