Microsoft Power Platform + Dynamics 365 Core

Module 1: Power Platform overview
In this module, you will learn the basics of the Power Platform. You will tour the various administrator portals and install applications.

Lessons
Overview
Configure Power Platform environments
Creating applications
Discovery and planning

Module 2: Data Modeling
In this module you will learn how to model data effectively using the platform's entities, attributes and relationships.

Lessons
Data model fundamentals
Relationships
Other entity options
Other field options
Internationalizing

Module 3: Model-driven apps
In this module you will learn about model driven applications and how to configure and use them.

Lessons
Configure model-driven apps
Configure model-driven forms
Configure views
Configure model-driven charts
Configure model-driven dashboards
Configure reports

Module 4: Canvas apps
In this module you will learn how to create and use canvas apps, as well as learn the differences between canvas apps and model-driven.

Lessons
Application fundamentals
Working with data and services
Customizing the user experience
Integration with model-driven apps

Module 5: Security

In this module you will learn how the platform's security model manages users' experiences and access to both data and functionality.

Lessons
Security overview
Business units
Manage security roles
Manage teams
Configure hierarchy security

Module 6: Platform Automation Overview
In this module you will learn the basics of the Power Platform automation capabilities.

Lessons
Automation overview

Module 7: Business Rules
In this module you will learn how to build and use business rules and how they work alongside other platform automations.

Lessons
Introduction to business rules
Additional business rule details

Module 8: Workflows
In this module you will learn how to build and use workflows and how they work alongside other platform automations.

Lessons
Introduction to workflows
Building workflows
Advanced workflows

Module 9: Microsoft Flows
In this module you will learn how to build and use Microsoft Flows and how they work alongside other platform automations.

Lessons
Introduction to Microsoft Flow
Other Flow concepts
Working with CDS
Building approval flows
Starting from apps
Flow deployment considerations

Module 10: Business Process Flows

In this module you will learn how to build and use business process flows and how they work alongside other platform automations.

Lessons
Introduction to business process flows
Configure business process flows
Additional business process flow details

Module 11: Introduction to integrations
In this module you will learn the basics of the Power Platform integration capabilities. You will learn how to configure and use email integrations.

Lessons
Overview of common scenarios
Email integration
Outlook integration

Module 12: Integration with Office
In this module you will learn how to integrate with common Office products like OneNote, Word and Excel.

Lessons
Templates
SharePoint
Microsoft Teams
Additional integrations

Module 13: Managing Data
In this module you will learn how to import and export data for the Power Platform and create and use data maps.

Lessons
Managing data overview
Duplicate detection
Importing data
Exporting data
Bulk delete

Module 14: Manage Instances and Applications
In this module you will learn how to enable and update first-party applications; install third-party apps and configure using admin portals.

Lessons
Overview
Manage applications

Module 15: Manage Solutions

In this module you will learn how to create, manage and deploy solutions.

Lessons
Solution concepts
Planning and creating solutions
Working with solution components
Distributing solutions
Working with managed solutions

Module 16: Additional Deployment Considerations
In this module you will learn how to configure for mobile and deploy components such as Microsoft Flow.

Lessons
Configure settings
Mobile configuration settings
Mobile configuration
