

TOC – SPLUNK FUNDAMENTALS 3

Module 1 – Exploring Statistical Commands

- Performing statistical analysis with functions of the stat command
- Using fieldsummary
- Using appendpipe
- Using eventstats
- Using streamstats

Module 2 – Exploring eval Command Functions

- Using conversion functions
- Using data and time functions
- Using string functions
- Using comparison and conditional functions
- Using informational functions
- Using statistical functions
- Using mathematical functions
- Using cryptographic functions

Module 3 – Exploring Lookups

- Including and excluding events based on lookup values
- Using KV Store lookups
- Using external lookups
- Using geospatial lookups
- Using database lookups
- Understanding best practices for lookups

Module 4 – Exploring Alerts

- Referencing lookups in alerts
- Outputting alert results to a lookup
- Logging and indexing searchable alert events
- Using a webhook alert action

Module 5 – Advanced Field Creation and Management

- Using regex
- Using the erex command
- Using the rex command
- Identifying regex best practices

Module 6 – Working with Self-Describing Data and Files

- Using the spath command
- Using the eval command with the spath function
- Extracting fields from table-formatted events with multikv

Module 7 – Advanced Search Macros

- Using nested search macros
- Previewing search macros before executing
- Using tags and event types in search macros

Module 8 – Using Acceleration Options: Reports and Summary Indexing

- Using report acceleration
- Using summary indexing

Module 9 – Using Acceleration Options: Data Models and tsidx Files

- Exploring data models using the datamodel command
- Using data model acceleration
- Working with tsidx files using the tstats command
