Blue Prism: Practitioner

The Practitioner course addresses best practices and practical applications of an automation process lifecycle, providing a deeper level of understanding of the functions and capabilities of Blue Prism IPA software.

This is an accelerated five-day, classroom-based course on the practical application of Blue Prism IPA solutions. Participants learn how to produce and manage a working automation. The course provides participants with real-life scenarios to plan and create functioning automated processes.

Enhance your confidence and expertise in designing and building advanced automations. You will be introduced to the various roles, documents and best practices used to create production quality, end-to-end process automation.

Practitioner Course Objectives
- Navigate the Blue Prism GUI
- Gain knowledge of advanced tasks within Blue Prism
- Comprehensive explanation of the lifecycle and delivery roadmap of IPA
- In-depth use of business objects and elements
- Guidance on Blue Prism best practices from accredited Instructors

Practitioner Course Content
- File Management
- Interacting with MS Excel
- Manipulating Collections
- Work Queue Priority
- Work Queue Tags
- Work Queues Statuses
- Deferring Items in a Work
- Queue
- Work Queue Reporting
- Defined Roles in the Process
- Lifecycle
- Process Lifecycle Roadmap
- Consolidation Exercise
- Terminology
