

SECURITY IN REACT NATIVE TRAINING

Course Content

Why security is required for JS frameworks more than native

- Storing Sensitive Info**
- Async Storage**
- Secure Storage**
- Authentication and Deep linking**
- OAuth2 and Redirects**
- Network Security (SSL Pinning)**

Lab Implementation

- - Certificate pinning**
- - Secure local storage**
- - JWT Token (Get from API) and send in header of for authenticating other APIs for authenticated users, I will create an API myself and show it.**
- Also, The API would be developed in .NET or Node from where user will get JWT token.**
