

Power BI Developer

Course Contents

Module 01: Power BI Desktop Primer

- Designing Queries using the Query Editor Window
- Importing Data into a Star Schema
- Building a Data Model using DAX
- Designing Interactive Reports with Bookmarks
- Designing Reports with Drill through Pages
- Publishing PBIX Project Files to the Power BI Service

Module 02: Designing Advanced Queries using M

- Understanding Query Design and the ETL Process
- Introduction to Programming with M
- Understanding Query Folding
- Designing with Query Functions
- Designing with Query Parameters
- Creating Reusable Project Template Files

Module 03: Developing Custom Data Connectors

- Understanding the Role of Custom Data Connectors
- Developing with the Power Query SDK
- Packaging, Deploying and Testing a Custom Data Connector
- Configuring Authentication for a Custom Data Connector
- Understanding Authentication Flows with OAuth2
- Creating a Custom Data Connector for the Microsoft Graph API

Module 04: Programming with TypeScript and the D3.js Library

- TypeScript Language Primer
- Getting Started with D3 and SVG Graphics
- Creating Data-driven Visuals
- Enhancing Visuals with Scales and Axes
- Using D3 Layouts
- Event Handling and Transitions

Module 05: Getting Started with the Power BI Developer Tools

- Developing Custom Visuals in Power BI
- Getting Started with Visual Studio Code
- Working with Node.js and Node Package Manager
- Creating Custom Visual Projects with PBIVIZ
- Understanding the Custom Visual Build Process
- Testing and Debugging a Custom Visual

Module 06: Developing and Distributing Custom Visuals

- Understanding the Power BI Visuals API
- Defining Visual Capabilities and Data Mappings
- Programming D3-style Data Binding using Categorical Data
- Extending a Visual with Custom Properties
- Packaging and Distributing Custom Visuals

Module 07: Programming the Power BI Service API

- Power BI Service API Overview
- Registering Applications with Azure AD
- Programming Authentication and Managing Access Tokens
- Developing Custom Applications to Publish PBIX Project Files
- Patching Data source Credentials and Refreshing Datasets

Module 08: Developing with Power BI Embedded

- Overview of the Embedding Features in Power BI
- Understanding Premium Capacities versus Embedded Capacities
- Retrieving Embedding Data using the Power BI Service API
- Generating and Managing Embed Tokens
- Using the Power BI JavaScript API to Embed Reports and Dashboards
- Writing Client-side Code to Interact with an Embedded Report

Module 09: Securing Datasets using Row Level Security

- Understanding Row Level Security (RLS)
- Implementing RLS in a Power BI Desktop Project
- Designing for RLS with the User-Owns-Data Model
- Implementing RLS Dynamically using the USERNAME Function
- Designing for RLS with the App-Owns-Data Model
- Generating Embed Tokens Restricted by RLS Roles

Module 10: Developing Streaming Datasets and Real-time Dashboards

- Introduction to Real-time Datasets
- Creating a Streaming Dataset using C# Code
- Designing Dashboards with Streaming Data Tiles
- Creating a Push Dataset with Real-time Data
- Integrating Azure Streaming Analytics Jobs

Module 11: Getting Started with R in Power BI

- Overview of R as a Data Analytics Platform
- R Programming Language Primer
- Writing and Testing Scripts in RStudio
- Using R Packages to Generate Charts and Graphs
- Using an R Script to Import Data into Power BI Desktop
- Creating Reports using the R Script Visual

Module 12: Developing Custom R Visuals

- Architecture of a Custom R Visual
- Defining CRAN Package Dependencies
- Mapping Data Fields to the R Script File
- Developing and Debugging the R Script File
- Packaging and Distributing Custom R Visuals
