

Using AL in Microsoft Dynamics 365 Business Central

CONTENTS

MODULE 1: MODERN DEVELOPMENT ENVIRONMENT

Module Overview

Visual Studio Code IDE

Application Language Code

What is Extension

Properties and Triggers

Objects and Extension Json

Configuration File

Team Development Feature

MODULE 2: BASICS OF AL PROGRAMMING LANGUAGE

Assignment and punctuation

Expressions (Operators)

Frequently used AL procedures

Conditional statements

MODULE 3: TABLES

What is Table?

Table Type

Properties

Data Types

Table Relations

Keys

Field Groups

Calculated Field

MODULE 4: TABLE EXTENSION

What is Table Extension?

Properties

MODULE 5: PAGE

What is Page?

Page Properties

Controls Properties

Page Parts

Actions

MODULE 6: PAGE EXTENSION

What is Page Extension?

Page Extension Properties

MODULE 7: DEBUGGING IN BUSINESS CENTRAL

Dialog function debugging techniques

The Business Central debugger

MODULE 8: FILES

What is File Data Type?

Best Practices

Supported Methods

TempBlob Table

Streaming

Instream and OutStream Data Types

MODULE 9: XMLPORT

XMLPort Fundamentals

Design XMLPorts

XML Properties

Importing and Exporting Plain Text

Using XMLPorts In AL Code

MODULE 10: QUERY

Query

Joining Data

Filtering Data

Properties

Aggregate Data

Queries and Records

MODULE 11: REPORTING

Report Overview

Report Description

Report Layout

Report Data Model

Request Page

Report Triggers and Functions

Report Triggers execution flow

MODULE 12: POWER BI

Content Packs

Prerequisites

Enabling Business Data for Power BI

Getting Data from Business Central
