This course bundle includes two classes, **TIBCO EBX Foundations** and **TIBCO EBX Development**.

In addition to these two classes, you will receive:

- 1 certification exam voucher
- 5 hours of scheduled Q&A with an instructor

TIBCO EBX Foundations

This course explores the fundamental features of TIBCO EBX software and explains how master data is represented and managed. It examines the key components of EBX software, including how data is organized in data spaces and datasets, how to model the structure of data, and how to control access to data. It introduces data workflows, which codify the business processes for data governance. Hands-on labs show how to navigate and view data, model data structures, and manage updates using data spaces. Attendees also execute and build data workflows that model data governance processes.

TIBCO EBX Development

This course introduces the organization of an EBX installation and the modules that represent an EBX application. It then presents examples of common use cases for using Java classes in an application. Hands-on labs provide attendees an opportunity to configure an EBX module, practice using the EBX Java API, and associate Java classes with EBX elements.

TIBCO Software Inc. unlocks the potential of real-time data for making faster, smarter decisions. Our Connected Intelligence platform seamlessly connects any application or data source; intelligently unifies data for greater access, trust, and control; and confidently predicts outcomes in real time and at scale. Learn how solutions to our customers' most critical business challenges are made possible by TIBCO at www.tibco.com.
