

Oracle Database: Backup and Recovery Workshop

Contents

1 Backup and Recovery: Overview

- DBA Responsibilities
- Separation of DBA Duties
- Assessing Your Recovery Requirements
- Categories of Failure
 - Statement Failure
 - User Process Failure
 - Network Failure
 - User Error
 - Instance Failure
 - Media Failure
 - Data Failures
- Instance Recovery
 - The Checkpoint (CKPT) Process
 - Redo Log Files and the Log Writer (LGWR) Process
 - Database Log Mode
 - Automatic Instance Recovery or Crash Recovery
 - Phases of Instance Recovery
 - Tuning Instance Recovery
 - Using the MTTR Advisor
 - Restoring and Recovering
 - Comparing Complete and Incomplete Recovery
 - The Complete Recovery Process
 - The Point-in-Time Recovery Process
- Oracle Data Protection Solutions
 - Flashback Technology
- Summary

2 Backup and Recovery Configuration

- Objectives
- Configuring for Recoverability
 - Configuring the Fast Recovery Area
 - Monitoring the Fast Recovery Area
- Multiplexing Control Files 2-6
- Redo Log Files
 - Multiplexing the Redo Log
 - Creating Archived Redo Log Files
- Archiver (ARCn) Process
 - Archived Redo Log Files: Naming and Destinations
- Configuring ARCHIVELOG Mode
- Summary
- Practice Overview

3 Using Recovery Manager (RMAN)

Objectives

Integrated Oracle Recovery Manager (RMAN)

Connecting to RMAN and a Target Database

Using SQL in RMAN

Types of RMAN Commands

Job Commands: Example

Configuring Persistent Settings for RMAN

Viewing Persistent Settings

Managing Persistent Settings

Specifying a Retention Policy

Recovery Window Retention Policy: Example

Summary

Practice Overview

4 Backup Strategies

Objectives

Understanding Types of Backups

Backup Terminology

Understanding Types of Backups

RMAN Backup Types

Backup Solutions: Overview

Balancing Backup and Restore Requirements

Comparing Backup Strategies

Option 1: Full and Incremental Backups

Option 2: Incrementally Updated Disk Backups

Option 3: Offloading Backups to Physical Standby Database in Data Guard Environment

5 Creating Database Backups

Objectives

Using RMAN Commands to Create Backups

Syntax and Clauses in RMAN

Creating Backup Sets

Creating Image Copies

Creating a Whole Database Backup

CDB Backup: Whole CDB Backup

CDB Backup: Partial CDB Backup

PDB Backup: Partial PDB Backup

Review: RMAN Backup Types

Incrementally Updated Backups

Incrementally Updated Backups: Example

Fast Incremental Backup

Maintaining the Block Change Tracking File

Monitoring Block Change Tracking

Automatic Disk-to-Disk Backup and Recovery

Oracle-Suggested Backup

Backing Up the Control File to a Trace File

Cataloging Additional Backup Files

Reporting on Backups

Using Dynamic Views

Summary

Practice Overview

6 Using Optional Backup Features

Objectives

Saving Backup Space with Unused Block Compression

Compressing Backups

Using RMAN Backup Compression

Using a Media Manager

Configuring Backup and Restore for Very Large Files

Backing Up and Restoring Very Large Files

Creating RMAN Multisection Backups

Creating Proxy Copies

Creating Duplexed Backup Sets by Using BACKUP COPIES

Creating Backups of Backup Sets

Archival Backups: Concepts

Creating Archival Backups with RMAN

Managing Archival Database Backups

Backing Up Read-Only Tablespaces: Considerations

Data Warehouse Backup and Recovery: Best Practices

Summary 4-17 Backing Up Recovery Files

Summary

Practice Overview

7 Tuning RMAN Backup Performance

Objectives

Is There a Problem?

Diagnosing Performance Bottlenecks

Diagnosing Performance Bottlenecks: Read Phase

Is There a "Write" Problem?

Diagnosing Performance Bottlenecks: Write or Copy Phase

Using Dynamic Views to Diagnose RMAN Performance

Monitoring RMAN Job Progress

Identifying Backup and Restore Bottlenecks

Asynchronous I/O Bottlenecks

Synchronous I/O Bottlenecks

Tuning RMAN Backup Performance

Parallelization of Backup Sets

RMAN Multiplexing

Summary

Practice Overview

8 Recovery Catalog Overview

Objectives

RMAN Repository Data Storage: Comparison of Options

Storing Information in the Recovery Catalog

Reasons to Use a Recovery Catalog

Summary

9 Creating a Recovery Catalog

Objectives

Creating the Recovery Catalog: Three Steps

1. Configuring the Recovery Catalog Database
2. Creating the Recovery Catalog Owner
3. Creating the Recovery Catalog

Summary

Practice Overview

10 Managing Target Database Records

Objectives

Managing Target Database Records in the Recovery Catalog

Registering a Database in the Recovery Catalog

Unregistering a Target Database from the Recovery Catalog

Recovery Catalog Resynchronization: Concepts

Manually Resynchronizing the Recovery Catalog

Summary

Practice Overview

11 Using Stored Scripts

Objectives

Using RMAN Stored Scripts

Executing RMAN Stored Scripts

Maintaining RMAN Stored Scripts

Summary

Practice Overview

12 Creating and Using Virtual Private Catalogs

Objectives

Creating and Using Virtual Private Catalogs

Creating a Virtual Private Catalog

Managing Virtual Private Catalogs

Upgrading Virtual Private Catalogs

Summary

Practice Overview

13 Restore and Recovery Concepts

Objectives

File Loss

Data Repair Techniques

Restoring and Recovering

Using RMAN RESTORE and RECOVER Commands

Instance Failure

Instance Recovery

Phases of Instance Recovery

Media Failure

Comparing Complete and Incomplete Recovery

Complete Recovery Process

Point-in-Time Recovery Process

Recovery with the RESETLOGS Option
Restore and Recovery Performance: Best Practices
Summary

14 Diagnosing Failures

Objectives
Reducing Problem Diagnosis Time
Automatic Diagnostic Workflow
Automatic Diagnostic Repository
ADR Command-Line Tool (ADRCI)
V\$DIAG_INFO View
Data Recovery Advisor
Data Failure: Examples
Data Recovery Advisor RMAN Command-Line Interface
Listing Data Failures
Advising on Repair
Executing Repairs
Classifying (and Closing) Failures
Data Recovery Advisor Views
Summary
Practice Overview

15 Performing Complete Recovery

Objectives
Ensuring Backups Are Available
Restoring in NOARCHIVELOG Mode
Recovery with Incremental Backups in NOARCHIVELOG Mode
Performing Complete Recovery
Review: Recovering Image Copies
Recovering Image Copies: Example
Performing a Fast Switch to Image Copies
Using SET NEWNAME for Switching Files
Using Restore Points
PDB Tempfile Recovery
PDB SYSTEM or UNDO Tablespace Recovery
PDB Non-SYSTEM Tablespace Recovery
Summary
Practice Overview

16 Performing Point-in-Time Recovery

Objectives
Point-in-Time Recovery
PITR Terminology
Performing Point-in-Time Recovery
When to Use TSPITR
Tablespace Point-in-Time Recovery: Architecture
Preparing for TSPITR
Determining the Correct Target Time
Determining the Tablespaces for the Recovery Set
Identifying Objects That Will Be Lost
Performing RMAN TSPITR
Performing Fully Automated TSPITR

- Improving TSPITR Performance
- Performing RMAN TSPITR with an RMAN-Managed Auxiliary Instance
- Performing RMAN TSPITR by Using Your Own Auxiliary Instance
- Troubleshooting RMAN TSPITR
- PITR of PDBs
- Recovering Tables from Backups
- Table Recovery: Graphical Overview
- Prerequisites and Limitations
- Specifying the Recovery Point in Time
- Process Steps of Table Recovery
- Summary
- Practice Overview

17 Performing Block Media Recovery

- Objectives
- What Is Block Corruption?
- Block Corruption Symptoms: ORA-01578
- How to Handle Corruption
- Setting Parameters to Detect Corruption
- Block Media Recovery
- Prerequisites for Block Media Recovery
- Recovering Individual Blocks
- Best Practice: Proactive Checks
- Checking for Block Corruption
- Summary
- Practice Overview

18 Performing Additional Recovery Operations

- Objectives
- Recovery from Loss of Server Parameter File
- Restoring the Server Parameter File from the Control File Autobackup
- Loss of a Control File
- Recovering from the Loss of All Control File Copies: Overview
- Restoring the Control File from Autobackup
- Restoring the SPFILE and the Control File
- Recovering NOLOGGING Database Objects
- Loss of a Redo Log File
- Log Group Status: Review
- Recovering from the Loss of a Redo Log Group
- Clearing a Log File
- Re-creating a Password Authentication File
- Summary
- Practice Overview

19 Oracle Flashback Technology: Overview

- Objectives
- Flashback Technologies Error Detection and Correction
- Review: Transactions and Undo
- Flashback Technology
- Summary

20 Using Logical Flashback Features

Objectives

Using Flashback Technology to Query Data

Flashback Query

Flashback Version Query

Flashback Table: Overview

Flashback Table

Flashback Table: Considerations

Flashback Transaction Query

Flashback Transaction Query: Considerations

Flashback Transaction Backout

Flashing Back a Transaction

Best Practices: Undo-Based Flashback Query, Flashback Table

Flashback Drop and the Recycle Bin

Recycle Bin

Bypassing the Recycle Bin

Using Flashback Data Archives

Creating a Temporal History and Enabling Archiving

How the Flashback Data Archive Works

Collecting User Context in Temporal History

Transparent Schema Evolution

Full Schema Evolution

Temporal Validity and History

Using the PERIOD FOR Clause

Filtering on Valid-Time Columns: Example

Filtering on Valid-Time Columns: Example

Using DBMS_FLASHBACK_ARCHIVE

Summary

Practice Overview

21 Using Flashback Database

Objectives

Preparing Your Database for Flashback

Guaranteeing Undo Retention

Flashback Database: Continuous Data Protection

Flashback Database

Flashback Database Architecture

Configuring Flashback Database

Flashback Database: Examples

CDB and PDB Flashback

Flashback Database Considerations

Monitoring Flashback Database Information

Guaranteed Restore Points

Flashback Database and Guaranteed Restore Points

PDB Flashback and Clean Restore Point

Best Practices: Flashback Database

Summary

Practice Overview

22 Using PDB Snapshots

Objectives

PDB Snapshot Carousel

Creating PDB Snapshots

Creating PDBs by Using PDB Snapshots

Dropping PDB Snapshots

Flashing Back PDBs by Using PDB Snapshots

Summary

23 Database Duplication Overview

Objectives

Using a Duplicate Database

Choosing Database Duplication Techniques

Duplicating an Active Database with “Push”

Comparing the “Push” and “Pull” Methods of Duplication

Duplicating a Database with a Target Connection

Duplicating a Database with a Recovery Catalog

Duplicating a Database Without a Recovery Catalog or Target Connection

Summary

24 Creating a Backup-Based Duplicate Database

Objectives

Creating a Backup-Based Duplicate Database

Creating an Initialization Parameter File for the Auxiliary Instance

Specifying New Names for Your Destination

Using the SET NEWNAME Clauses

Substitution Variables for SET NEWNAME

Specifying Parameters for File Naming

Starting the Instance in NOMOUNT Mode

Ensuring That Backups and Archived Redo Log Files Are Available

Allocating Auxiliary Channels

Understanding the RMAN Duplication Operation

Specifying Options for the DUPLICATE Command

Using Additional DUPLICATE Command Options

Duplicating Selected PDBs in a CDB

Cloning an Active PDB into an Existing CDB

Example: Duplicating PDB1 from CDB1 to CDB2 as PDB1

Example: Duplicating PDB1 from CDB1 to CDB2 as PDB2

Summary

Practice Overview
