

# InsightAppSec Certified Specialist

## Table of Contents

### AppSec with InsightAppSec

- Define application security
- Common vulnerabilities in web applications
- How web applications communicate
- How InsightAppSec tests for common vulnerabilities
- Basic scanning
- Manage your application settings

### Features & Architecture

- Product features
- Product components
- How components interact

### Understanding Scans

- Configure scans
- Customize your deployment
- Establish an engine group
- Install & pair an on-prem engine
- Verify the on-prem engine status
- Read scan logs for diagnostic information

### Managing Scan Configurations

- **Create an attack template**
- **Create a scan configuration**

### Authentication

- **Record an authentication macro**
- **Import a macro file for use**
- **Use an HTTP archive file for authentication**

## **Working with results**

- **Manage scan findings**
- **Review and validate findings**
- **Manually validate a finding**
- **Generate a report from a scan**

## **Manage Scan Schedules**

- **Create an InsightAppSec scan schedule**
- **Profile settings**
- **Scan schedule**
- **Blackout schedule**
- **Global blackout**

## **Advanced Topics**

- **Perform a scan using an API**
- **Gather information using the InsightAppSec API**
- **Import the InsightAppSec API**
- **Modify instructions within a macro file**
- **Use environments to manage API variables**
