

| Excel With Python                                      |  |
|--------------------------------------------------------|--|
|                                                        |  |
| <b>Module 1:</b>                                       |  |
| Python Refresh                                         |  |
|                                                        |  |
| <b>Module 2</b>                                        |  |
| Pandas, NumPy, Matplotlib, Seaborn                     |  |
|                                                        |  |
| <b>Module 3</b>                                        |  |
| Running Python scripts in Excel (XLWings)              |  |
|                                                        |  |
| <b>Module 4:</b>                                       |  |
| Matplotlib & Seaborn in Excel                          |  |
|                                                        |  |
| <b>Module 5:</b>                                       |  |
| Reading & Writing Data structures using Numpy & Pandas |  |
|                                                        |  |
| <b>Module 6:</b>                                       |  |
| Using User defined Functions (UDF's)                   |  |
|                                                        |  |
| Duration : 4 Days                                      |  |
