

Python for Data Analytics and Machine Learning (Oracle)

Chapter 01: Role of Python in Data Analytics and Machine Learning

- Role of Python in Data Analytics and Machine Learning

Chapter 02: Python and Its Interpreter

- Python and Its Interpreter
- Practice: Lab Environment

Chapter 03: Python Datatypes

- Python Datatypes
- Practice 3-1: Working with Datatypes

Chapter 04: Control Structures in Python

- Control Structures in Python
- Practice 4-1: Working with Control Structures in Python

Chapter 05: Functions in Python

- Functions in Python
- Practice 5-1: Working with Functions in Python

Chapter 06: Lists in Python

- Lists in Python
- Practice 6-1: Working with Lists in Python

Chapter 07: Tuples in Python

- Tuples in Python
- Practice 7-1: Working with Tuples in Python

Chapter 08: Sets in Python

- Sets in Python
- Practice 8-1: Working with Sets in Python

Chapter 09: Dictionaries in Python

- Dictionaries in Python
- Practice 9-1: Working with Dictionaries in Python

Chapter 10: Regular Expressions in Python

- Regular Expressions in Python
- Practice 10-1: Working with Regular Expressions in Python

Chapter 11: Functions of the re Module

- Functions of the re Modul
- Practice 11-1: Working with Functions of the re Module

Chapter 12: Working with NumPy

- Working with NumPy
- Practice 12-1: Working with NumPy

Chapter 13: Working with Pandas

- Working with Panda
- Practice 13-1: Working with Pandas

Chapter 14: Accessing Data Sources in Python

- Accessing Data Sources in Python
- Practice 14-1: Connecting to Oracle Database for Python

Chapter 15: Data Visualization in Python

- Data Visualization in Python
- Practice 15-1: Working with Matplotlib in Python
