

## BOOTCAMP- MODERN-DATACENTER

Duration :- 15 Days Regular Track

Duration:- 8 Days Fast Track

### Table of Contents

#### Server

##### **Deploy and manage identity infrastructure (*Windows Server*)**

**Module 1:** Introduction to AD DS

**Module 2:** Manage AD DS domain controllers and FSMO roles

**Module 3:** Implement Group Policy Objects

**Module 4:** Manage advanced features of AD DS

##### **Deploy and manage identity infrastructure**

**Module 1:** Implement hybrid identity with Windows Server

**Module 2:** Deploy and manage Azure IaaS Active Directory domain controllers in Azure

##### **Manage Windows Servers and workloads in a hybrid environment**

**Module 1:** Perform Windows Server secure administration

**Module 2:** Describe Windows Server administration tools

**Module 3:** Perform post- installation configuration of Windows Server

**Module 4:** Just Enough Administration in Windows Server

##### **Manage Windows Servers and workloads in a hybrid environment**

**Module 1:** Administer and manage Windows Server IaaS Virtual Machine remotely

**Module 2:** Manage hybrid workloads with Azure Arc

## **Manage virtualization and containers in a hybrid environment**

**Module 1:** Configure and manage Hyper-V

**Module 2:** Configure and manage Hyper-V virtual machines

**Module 3:** Secure Hyper-V workloads

**Module 4:** Run containers on Windows Server

**Module 5:** Orchestrate containers on Windows Server using Kubernetes

## **Manage virtualization and containers in a hybrid environment**

**Module 1:** Plan and deploy Windows Server IaaS Virtual Machines

**Module 2:** Customize Windows Server IaaS Virtual Machine images

**Module 3:** Automate the configuration of Windows Server IaaS Virtual Machines

## **Implement and manage an on-premises and hybrid networking infrastructure**

**Module 1:** Deploy and manage DHCP

**Module 2:** Implement Windows Server DNS

**Module 3:** Implement IP Address Management

**Module 4:** Implement remote access

## **Implement and manage an on-premises and hybrid networking infrastructure**

**Module 1:** Implement hybrid network infrastructure

**Module 2:** Implement DNS for Windows Server IaaS VMs

**Module 3:** Implement Windows Server IaaS VM IP addressing and routing

## **Configure storage and file services**

**Module 1:** Manage Windows Server file servers

**Module 2:** Implement Storage Spaces and Storage Spaces Direct

**Module 3:** Implement Windows Server Data Deduplication

**Module 4:** Implement Windows Server iSCSI

**Module 5:** Implement Windows Server Storage Replica

## Configure storage and file services

**Module 1:** Implement a hybrid file server infrastructure

*(Overview of Azure file services)*

**Module 1 (cont.):** Implement a hybrid file server infrastructure

*(Implementing Azure File Sync)*

## PowerShell

### Getting Started with Windows PowerShell

**Module 1:** Review Windows PowerShell

**Module 2:** Understand the command syntax in Windows PowerShell

**Module 3:** Find commands and Get-Help in Windows PowerShell

### Maintain system administration tasks in Windows PowerShell

**Module 1:** Manage Active Directory Domain Services using PowerShell cmdlets

**Module 2:** Manage network service settings for Windows devices using PowerShell cmdlets

**Module 3:** Manage Windows Server settings using PowerShell cmdlets

**Module 4:** Manage settings for a local Windows machine using PowerShell cmdlets

### Work with the Windows PowerShell pipeline

**Module 1:** Understand the Windows PowerShell pipeline

**Module 2:** Select, sort, and measure objects using the pipeline

**Module 3:** Filter objects out of the pipeline

**Module 4:** Enumerate objects in the pipeline

**Module 5:** Send pipeline data as output

**Module 6:** Pass pipeline data

### Work with PowerShell providers and PowerShell drives in Windows PowerShell

**Module 1:** Connect with data stores using PowerShell providers

## **Module 2: Use PowerShell drives in PowerShell**

### **Query management information by using Common Information Model and Windows Management Instrumentation**

**Module 1:** Review CIM and WMI

**Module 2:** Query configuration information by using CIM and WMI

**Module 3:** Query and manipulate repository objects by using CIM and WMI methods

### **Use variables, arrays, and hash tables in Windows PowerShell scripts**

**Module 1:** Manage variables in Windows PowerShell scripts

**Module 2:** Work with arrays and hash tables in Windows PowerShell scripts

### **Create and modify scripts by using Windows PowerShell**

**Module 1:** Create and run scripts by using Windows PowerShell

**Module 2:** Work with scripting constructs in Windows PowerShell

**Module 3:** Import data in different formats for use in scripts by using Windows PowerShell cmdlets

**Module 4:** Use methods to accept user inputs in Windows PowerShell scripts

**Module 5:** Troubleshoot scripts and handle errors in Windows PowerShell

**Module 6:** Use functions and modules in Windows PowerShell scripts

### **Administer remote computers by using Windows PowerShell**

**Module 1:** Manage single and multiple computers by using Windows PowerShell remoting

**Module 2:** Use advanced Windows PowerShell remoting techniques

**Module 3:** Manage persistent connections to remote computers by using Windows PowerShell sessions

### **Manage cloud resources by using Windows PowerShell**

**Module 1:** Review the Azure PowerShell module

**Module 2:** Review the features and tools for Azure Cloud Shell

**Module 3:** Manage Azure resources with Windows PowerShell

## Manage Microsoft 365 services by using Windows PowerShell

**Module 1:** Manage users, groups, and licenses in Azure AD by using Windows PowerShell

**Module 2:** Manage Exchange Online by using Windows PowerShell

**Module 3:** Manage SharePoint Online by using Windows PowerShell

**Module 4:** Manage Microsoft Teams by using Windows PowerShell

## Create and manage background jobs and scheduled jobs in Windows PowerShell

**Module 1:** Create and manage background jobs using Windows PowerShell

**Module 2:** Create and manage scheduled jobs using Windows PowerShell

## HCI

### Introducing Azure Stack HCI

- Overview of Azure Stack HCI
- • Overview of Azure Stack HCI technologies
- • Overview of Azure Stack HCI management tools
- • Overview of the Azure Stack HCI hybrid capabilities

### Operating and maintaining Azure Stack HCI

- Implementing and managing workloads on Azure Stack HCI
- • Maintaining Azure Stack HCI

### Planning for and implementing Azure Stack HCI storage

- • Overview of Azure Stack HCI Storage core technologies
- • Planning for Storage Spaces Direct in Azure Stack HCI
- • Implementing a Storage Spaces Direct-based hyper-converged infrastructure
- • Managing Storage Spaces Direct in Azure Stack HCI
- • Planning for and implementing Storage QoS
- • Planning for and implementing Storage Replica

### Planning for and implementing Azure Stack HCI networking

- Overview of Azure Stack HCI core networking technologies

- • Overview of network virtualization and Software-Defined Networking
- • Planning for and implementing Switch Embedded Teaming
- • Planning for and implementing Datacenter Firewall
- • Planning for and implementing Software Load Balancing
