

Angular with Laravel Application development

1. Introducing Angular

- What is Angular?
- Central Features of the Angular Framework
- Appropriate Use Cases
- Building Blocks of an Angular Application
- Basic Architecture of an Angular Application
- Installing and Using Angular
- Anatomy of an Angular Application
- Running the Application

2. Components

- What is a Component?
- An Example Component
- Creating a Component Using Angular CLI
- The Component Class
- The @Component Decorator
- Registering a Component to Its Module
- Component Template
- Using a Component
- Run the Application
- Component Hierarchy
- The Application Root Component
- The Bootstrap File

3. Reactive Forms

- Reactive Forms Overview
- The Building Blocks
- Import ReactiveFormsModule
- Construct a Form
- Design the Template
- FormControl Constructor
- Getting Form Values
- Setting Form Values
- The Synchronous Nature
- Subscribing to Input Changes
- Validation
- Built-In Validators
- Showing Validation Error
- Custom Validator

- Using a Custom Validator

4. Services and Dependency Injection

- What is a Service?
- Creating a Basic Service
- The Service Class
- What is Dependency Injection?
- Injecting a Service Instance
- Injectors

5. Pipes and Data Formatting

- What are Pipes?
- Built-In Pipes
- Using Pipes in HTML Template
- Chaining Pipes
- The number Pipe
- Currency Pipe
- Create a Custom Pipe
- Custom Pipe Example
- Using Custom Pipes
- Using a Pipe with ngFor
- A Filter Pipe

6. HTTP Client

- The Angular HTTP Client
- Using The HTTP Client - Overview
- Importing HttpClientModule
- Simple Example
- Service Using HttpClient
- ES6 Import Statements
- Making a GET Request
- What does an Observable Object do?
- Using the Service in a Component
- Error Handling
- Customizing Error Object with. catch ()
- Making a POST Request
- Making a PUT Request
- Making a DELETE Request

7. Laravel Architecture Foundation

- Service Providers
- Service Containers

- Facades
- Request Life Cycle
- Application Structure

8. Basic Routing

- Basic Routing
- Route Parameters

9. Responses

- Views
- Redirects
- Custom Responses

10. Middleware

- Introduction
- Defining Middleware
- Registering Middleware

11. Controllers

- Introduction
- Basic Controllers
- Controller Middleware
- Implicit Controllers
- RESTful Resource Controllers

12. Blade Templates

- Creating Templates
- PHP Output
- Control Structures
- Templates
- Template Inheritance

13. Advance Routing

- Named Routes
- Secure Routes
- Parameter Constraints
- Route Prefixing
- Domain Routing

14. URL Generation

- The Current URL
- Generating Framework URLs
- Asset URLs

- Generation Shortcuts

15. Request Data

- Retrieval
- Old Input
- Upload Files
- Cookies

16. Forms

- Forms
- Fields
- Buttons
- Security

17. Validation

- Validation
- Controller Validation
- Form Request Validation
- Working with Error Messages
- Error Messages and Views
- Available Validation Rules
- Custom Error Messages
- Custom Validation Rules

18. Basic Database Usage

- Configuration
- Read/Write Connections
- Running Queries
- Database Transaction
- Accessing Connections

19. Query Builder

- Introduction
- Selects
- Join
- DML Queries

20. Schema Builder

- Creating Tables
- Column Types
- Special Column Types
- Column Modifiers
- Updating Tables
- Dropping Tables

- Schema Tricks

21. Migrations

- Basic Concept
- Creating Migration
- Rolling Back
- Migration Tricks

22. Eloquent ORM

- Creating new models
- Reading Existing Models
- Updating Existing Models
- Deleting Existing Models

23. Eloquent Queries

- Preparation
- Eloquent to string
- Query Structure
- Magic Queries
- Query Scopes

24. Eloquent Relationship

- Relationships
- Implementing Relationship
- Relating and Querying

25. Authentication

26. Authorization
