

UiPath : Business Administrator

Delivery Method

Instructor-Led

Course Duration

16 Hours

Course Description

Overview

This course covers the options of delivering the UiPath Platform and its the component for configuring and deploying Robotic Process Automation governance policies for UiPath Studio, UiPath StudioX and UiPath Assistant.

Audience

This course is aimed for Enterprise IT administrators, Solution Architects, Security experts and consultants.

Pre-requisite Knowledge/Skills

This course is an introduction to how Automation Ops can be used for deploying RPA governance policies. You will need basic automation knowledge to enroll.

Course Objectives

The UiPath Automation Ops course explains the component of the UiPath platform meant for creating, deploying and managing Robotic Process Automation (RPA) governance policies in UiPath Studio, UiPath StudioX and UiPath Assistant. You will first be introduced to the purpose and main functionalities of Automation Ops. You will then learn about what RPA governance is, how to create governance policies, and how Automation Ops can be used to deploy governance policies at tenant, group, and user level.

Course Outline

UiPath Automation suite Overview

- UiPath Automation Suite is our way to bring all the benefits of UiPath Automation Cloud and put them under customers' full control, by hosting them in public cloud or on-premises.

UiPath Automation Ops

- This course covers an introduction and overview of Automation Ops and how it can be used for governance

UiPath Automation Cloud

- You'll be taught how to navigate the Automation Cloud interface, the cloud services available, and how to work with users and groups.

Automation Infrastructure Fundamentals

- The Infrastructure Engineer Workflow Map
- Introduction to the UiPath Business Automation Platform
- The Delivery Options for the UiPath Business Automation Platform
- Infrastructure Requirements for Automation Cloud and Automation Suite

Orchestrator

- Orchestrator installation and troubleshooting.
- Orchestrator for RPA developers
- Orchestrator Personal workspaces
- Credential Store integration in orchestrator

UiPath Insight

- Interested to measure your automation program through RPA metrics and automation KPIs? We have the right tool for you: UiPath Insights, the automation analytics component of the UiPath Platform.

Labs

The Lab component of the course consists of exercises mapped to the Theory portion. Each exercise helps the student practice and apply the skills learned in the Theory section of the course.
