- 1. Introduction to Azure Identity
 - Overview of Azure Active Directory
 - Understanding authentication and authorization
 - Introduction to Azure AD Connect
- 2. Creating an Azure Active Directory Tenant
 - Creating a new Azure AD Tenant
 - Managing Azure AD Users and Groups
 - Configuring Azure AD domain services
- Authentication with Azure AD
 - Understanding authentication with Azure AD
 - Configuring Azure AD authentication for web applications
 - Configuring Azure AD authentication for mobile applications
- 4. Authorization with Azure AD
 - Understanding authorization with Azure AD
 - Configuring Azure AD authorization for web applications
 - Configuring Azure AD authorization for API access
- 5. Azure AD Connect
 - Overview of Azure AD Connect
 - Configuring Azure AD Connect for user synchronization
 - Managing user identity with Azure AD Connect
- 6. Multi-Factor Authentication (MFA)
 - Overview of MFA in Azure AD
 - Configuring MFA for users and applications
 - Troubleshooting MFA issues
- 7. Azure AD B2B and B2C
 - Overview of Azure AD B2B and B2C
 - Configuring Azure AD B2B for guest access
 - Configuring Azure AD B2C for customer identity management
- 8. Conditional Access
 - Understanding Conditional Access in Azure AD
 - Configuring Conditional Access policies

- Monitoring and reporting on Conditional Access
- 9. Best Practices for Azure Identity
 - Securing access to Azure resources with Azure AD
 - Securing access to third-party applications with Azure AD
 - Managing identity and access with RBAC and Azure AD.
- 10. Identity Governance and Compliance
- Overview of Azure AD Identity Governance
- Configuring Identity Governance policies
- Managing compliance and audit reporting in Azure AD.
