

#### **DO285**

### Containers, Kubernetes, and Red Hat OpenShift

#### **Administration II Course overview**

Through an introduction to Docker, Kubernetes, and Red Hat OpenShift Platform, this course helps you understand one of the key tenets of the DevOps movement: continuous integration and continuous deployment. Containers have become a key technology for the configuration and deployment of applications and microservices. Kubernetes is a container orchestration platform that provides foundational services in Red Hat OpenShift Container Platform, which allows enterprises to manage container deployments and scale their applications using Kubernetes.

#### Course outline

#### **Describe container technology**

Describe how software can run in containers orchestrated by the OpenShift Container Platform.

#### Create containerized services

Provision a server using container technology.

### **Manage containers**

Manipulate pre-built container images to create and manage containerized services.

# Manage container images

Manage the life cycle of a container image from creation to deletion.

# **Create custom container images**

Design and code a Dockerfile to build a custom container image.

### **Deploy multi-container applications**

Deploy applications that are containerized using multiple container images.

### **Install OpenShift Container Platform**

Install OpenShift and configure the

cluster. Explore OpenShift

### networking concepts

Describe and explore OpenShift networking concepts.

### Deploy containerized applications on OpenShift

Deploy single container applications on OpenShift Container Platform.

### **Deploy multi-container applications on OpenShift**

Deploy applications that are containerized using multiple container images on an OpenShift cluster.

#### **Execute commands**

Execute commands using the command-line interface.

#### Control resource access

Control access to OpenShift

resources. Allocate persistent

storage Implement persistent

storage.

# Manage application deployments

Manipulate resources to manage deployed applications.

# Install the metrics subsystem

Install and configure the metrics gathering system.

# **Manage OpenShift Container Platform**

Manage and monitor OpenShift resources and software.
