

DO375

Developing Advanced Automation with Red Hat Ansible Automation Platform and exam

Course description

Advance your Ansible skills and develop automation that scales by applying recommended practices with the new, container focused tools from Red Hat Ansible Automation Platform

Developing Advanced Automation with Red Hat Ansible Automation Platform and exam (DO375) is designed for automation content developers to leverage the new, container focused tools from Red Hat® Ansible Automation Platform to efficiently develop automation that can be managed by the automation controller. Learn recommended practices for automation development using reusable code, advanced playbook techniques, shared execution environments, and preparing for scalable automation with the automation content navigator.

This course is based on Red Hat Ansible Automation Platform 2.2. The Red Hat Certified Specialist in Developing Automation with Ansible Automation Platform exam (EX374) is included in this offering.

Recommended training

- [Take our free assessment](#) to gauge whether this offering is the best fit for your skills.
- [Red Hat Enterprise Linux Automation with Ansible \(RH294\)](#)
- Be a [Red Hat Certified Engineer \(RHCE®\)](#) on Red Hat Enterprise Linux 8, or demonstrate equivalent Ansible experience
- Basic knowledge of Red Hat Ansible Automation Platform is recommended but not required.
- Basic knowledge of storage technologies, such as disk types, SAN, and NAS is recommended.

Outline for this course

Develop Playbooks with Ansible Automation Platform 2

Develop Ansible Playbooks with Red Hat Ansible Automation Platform 2 following recommended practices.

Manage Content Collections and Execution Environments

Run playbooks that use content collections not included in ansible-core, either from an existing execution environment or by downloading them from the automation hub.

Run Playbooks with Automation Controller

Explain what automation controller is and use it to run playbooks that you developed with automation content navigator.

Work with Ansible Configuration Settings

Examine and adjust the configuration of Ansible and automation content navigator to simplify development and to troubleshoot issues.

Manage Inventories

Manage inventories by using advanced features of Ansible.

Manage Task Execution

Control and optimize the execution of tasks by Ansible Playbooks.

Transform Data with Filters and Plugins

Populate, manipulate, and manage data in variables using filters and plugins.

Coordinate Rolling Updates

Use advanced features of Ansible to manage rolling updates in order to minimize downtime and to ensure maintainability and simplicity of Ansible Playbooks.

Create Content Collections and Execution Environments

Write your own Ansible Content Collections, publish them, embed them in a custom execution environment, and run them in playbooks by using the automation controller.
