

# Terraform Certified Associate with AWS

**Duration:** 4 days (8hrs/day)

**Prerequisites:** Basic knowledge of Cloud AWS.

**Course Objective:** Equip participants with the essential skills to proficiently leverage Terraform for Infrastructure as Code (IaC) on AWS, covering setup, configuration management, modularization, remote state handling, and utilization of Terraform Cloud for scalable and secure infrastructure deployment, ultimately preparing them for success in obtaining the Terraform Certified Associate (003) certification.

**Cloud Platform:** AWS, **Terraform Version:** Latest

**Lab Requirement:** Participant AWS Trial Account Required

## Module 1 - Getting Started & Setting Up Labs

Introduction to Infrastructure as Code and Terraform

**Lab:** Installation of Terraform on Windows

Comparison between Terraform and Ansible

Understanding Terraform Providers

Authenticate AWS with Terraform

**Lab:** Setting Up Terraform on Windows and Azure Authentication

Basic Terraform commands: init, plan, apply

**Lab:** Defining Provider & Using Basic Terraform commands

## Module 2 – Building Cloud Infrastructure with Terraform

**Lab:** Creating EC2 instances in AWS

**Lab:** Provisioning Virtual Networks, Subnets, Elastic IPs, and Network Interfaces

**Lab:** Deploying Windows and Linux EC2

**Lab:** Configuring S3 Storage, Security Groups

Understanding Terraform State file

Understanding Working of State file – Desired State & Current State

Terraform Provider Versioning

**Lab:** Methods to define Terraform Provider Versions

### **Module 3 - Read, Generate, Modify Configurations**

Understanding Attributes and Output Values in Terraform

**Lab:** Handling Terraform attributes and output values

**Lab:** Referencing attributes across resources

Understanding Terraform Variables and Data Types – (String, Number, Boolean, List, Map)

**Lab:** Methods to Define Variables & Variable Arguments

**Lab:** Fetching Data from List & Map in Variables

Understanding Meta-Arguments – (for\_each & count)

**Lab:** Using Meta-Arguments

Understanding conditional expression and locals

**Lab:** Using Conditional expression and Locals

Understanding Expressions – for & Splat expression

**Lab:** Using for and Splat expression

Understanding Data Sources & Dynamic Blocks

**Lab:** Using Data Sources

**Lab:** Using Dynamic Blocks

**Lab:** Exploring debugging techniques in Terraform

Terraform Commands – validate, fmt

**Lab:** Using terraform validate and terraform fmt

**Lab:** Replacing Resource in terraform manually – taint and replace

**Lab:** Using Terraform Graph utility

**Lab:** Saving Terraform Plan to a file and apply from plan file

### **Module 4 - Terraform Provisioners**

Understanding provisioners in Terraform

Understanding Connection Block

Types of provisioners

**Lab:** Implementing file, remote-exec and local-exec provisioners

## **Module 5 - Terraform Modules & Workspaces**

Applying the DRY (Don't Repeat Yourself) principle

Understanding Usage of Terraform Modules

Standard Structure of Terraform Modules

**Lab:** Creating and Using local Modules

**Lab:** Utilizing Modules from Terraform Registry

Understanding and implementing Terraform workspaces

**Lab:** Working with Terraform Workspaces

## **Module 6 - Remote State Management**

Integrating Terraform with Git for team collaboration

Understanding Basic Working of Git

**Lab:** Handling Git commands (initialize, commit, push, tagging, branching)

Challenges and security considerations in Terraform state

**Lab:** Remote state management with Terraform, including importing existing resources

Terraform State Backend Configuration

**Lab:** Putting terraform state file on AWS S3

## **Module 7 – Terraform Cloud and Enterprise Overview**

Introduction to Terraform Cloud

Creating infrastructure with Terraform Cloud

Overview of Sentinel Security in Terraform

**Lab:** Basic Deploying Infrastructure with Terraform Cloud and Sentinel Security
