

## **Understanding Scope 3 Emissions**

### **DAY 1**

Introduction to Scope 3 Emissions

Definition and overview of scope 3 emissions.

Scope 3 emissions and their significance in corporate sustainability.

Overview of the GHG Protocol and corporate reporting frameworks.

Identifying the scope and boundaries of Scope 3 emissions.

Understanding the categories of Scope 3 emissions.

### **DAY 2**

Measuring Scope 3 Emissions

Methods and tools for measuring scope 3 emissions.

Conducting a Scope 3 emissions inventory.

Data collection and analysis.

Calculation methodologies and emission factors.

Challenges and limitations of Scope 3 emissions accounting.

### **DAY 3**

Scope 3 Emissions Reduction Strategies

Identifying and prioritizing scope 3 emissions sources.

Analyzing and interpreting Scope 3 emissions data.

Understanding the factors that drive Scope 3 emissions.

Setting reduction targets and strategies.

Collaboration and engagement with suppliers and other stakeholders.

### **DAY 4**

Integration of Scope 3 Emissions into Corporate Strategy

Developing a Scope 3 emissions reduction strategy

Implementing Scope 3 emissions reduction measures

Monitoring and reporting on Scope 3 emissions

Communicating Scope 3 emissions performance to stakeholders

Opportunities for innovation and circular economy approaches

### **DAY 5**

Implementation and best practices of scope 3 emission management

Companies successfully addressed scope 3 emissions.

Best practices and lessons learned from scope 3 emissions management

Industry-specific examples and challenges

Examples of policy and regulatory frameworks supporting scope 3 emissions reduction

Future trends and opportunities for scope 3 emissions management.
