

## **AZ-1003: Secure storage for Azure Files and Azure Blob Storage**

### **Create an Azure Storage account**

#### **Introduction**

**Decide how many storage accounts you need**

**Choose your account settings**

**Choose an account creation tool**

**Exercise - Create a storage account using the Azure portal**

**Knowledge check - Create a storage account**

**Summary**

### **Configure Azure Blob Storage**

#### **Introduction**

**Implement Azure Blob Storage**

**Create blob containers**

**Assign blob access tiers**

**Add blob lifecycle management rules**

**Determine blob object replication**

**Upload blobs**

**Determine Blob Storage pricing**

**Interactive lab simulation**

**Knowledge check**

**Summary and resources**

### **Configure Azure Storage security**

## **Introduction**

**Review Azure Storage security strategies**

**Create shared access signatures**

**Identify URI and SAS parameters**

**Determine Azure Storage encryption**

**Create customer-managed keys**

**Apply Azure Storage security best practices**

**Interactive lab simulation**

**Knowledge check**

**Summary and resources**

**Secure and isolate access to Azure resources by using network security groups and service endpoints**

## **Introduction**

**Use network security groups to control network access**

**Exercise - Create and manage network security groups**

**Secure network access to PaaS services with virtual network service endpoints**

**Exercise - Restrict access to Azure Storage by using service endpoints**

**Summary**

## **Guided Project - Azure Files and Azure Blobs**

### **Introduction**

**Exercise - Provide storage for the IT department testing and training**

**Exercise - Provide storage for the public website**

**Exercise - Provide private storage for internal company documents**

**Exercise - Provide shared file storage for the company offices**

**Exercise - Provide storage for a new company app**

**Knowledge check**

## **Summary and resources**
