1 Introduction to Visual Builder Studio and Visual Builder

Objectives	1-2
Intended Audience	1-3
Course Overview	1-4
What Is Visual Builder Studio?	1-6
VB Studio Application Development and Delivery	1-7
Visual Builder Studio – A Complete Project Platform	1-8
Managing Your Development Process	1-9
Sending Event Notifications to Any Application	1-10
Common Tasks in Visual Builder Studio	1-11
Opening a Project	1-12
Project Home	1-13
Adding Team Members	1-14
Adding Environments	1-15
Tracking Issues	1-16
Managing the Git Repository	1-17
Creating a New Project Using a Template	1-18
Develop Visual Apps with Visual Builder Studio	1-19
Develop Visual Apps with Visual Builder Stand-Alone	1-20
VBS and VB Bespoke Functional Architecture	1-21
The World Is All About “Agility”	1-22
Summary	1-23

2 Create Visual Applications in Visual Builder

Objectives	2-2
Overview of a Visual Application	2-3
Single Page Application Architecture	2-4
Variants of Single Page Application Development	2-5
VB App UI Single Page Application Architecture	2-6
Customizations and Extensions	2-7
Visual Builder – Architecture	2-8
Typical Visual Application Development Workflow	2-9
Options for Working with a Visual Application in VBS	2-10
Creating a New Visual Application Within a Project	2-11
Cloning an Existing Visual Application Git Repository	2-12

Switching Git Branches to Reuse Your Workspace	2-13
Creating a Project and Visual Application Together	2-14
Opening a Workspace	2-15
Choose What to Do in Your Workspace	2-16
Create a New Web Application	2-17
Create a New Mobile Application	2-18
How Are Visual Applications Structured?	2-19
Use the Designer to Edit Source Files in the Workspace	2-20
Create Flows and Pages	2-21
Use Diagram View to See the App's Structure	2-22
Add a GUI Component to the Page	2-23
Use Containers and Layout Components in Pages	2-24
Use the Page Designer to Design Layouts	2-25
Create One Design with Dynamic Components	2-26
Use the Structure View to View and Modify the Page	2-27
Control Placement of Panels	2-28
Run the Application	2-29
Commit Your Work	2-30
Use Branches to Isolate Changes	2-31
Oracle Fusion Apps Naming Conventions	2-33
Manage Visual Application Settings	2-34
Security – Create and Assign Application Roles	2-35
Manage Web or Mobile App Settings	2-36
Summary	2-37

3 Configure and Manage Service Connections in Visual Applications

Objectives	3-2
Visual Builder Service Connections	3-3
What Is a Backend?	3-4
Backend Service Types	3-5
Create and Use Environments	3-6
Add a Backend Service Instance	3-7
Application Profiles	3-8
Manage Application Profiles	3-9
Edit Application Profiles	3-10
Create a Service Connection Source	3-11
Choose a Service Catalog	3-12
Create a Service Connection from the Catalog	3-13
Service Connections: Static vs. Dynamic	3-14
Metadata Retrieval Options	3-16
Create an External Service Connection (No Catalog)	3-17

- Create an External Service Connection (No Descriptor) 3-18
- Edit a Service Connection Definition 3-19
- Test Connection and Define Service Data Structures 3-20
- Edit a Service Connection 3-21
- Edit a Service Connection: Add a Server 3-22
- Add Server Variables for Service Connections 3-23
- Edit a Service Connection: Add Endpoints 3-24
- Edit a Service Connection: Edit Endpoints 3-25
- Retrieve Metadata for a Dynamic Service Connection 3-26
- Convert a Service Connection between Static and Dynamic 3-27
- Edit a Service Connection: Add Transforms 3-28
- Edit a Service Connection: Edit Authentication 3-29
- Connection and Authentication Types 3-30
- Identity Propagation Authentication Mechanisms 3-31
- Fixed Credential Authentication Mechanisms 3-33
- Cross Origin Request (CORS) Limitations 3-34
- Handling CORS in Visual Builder Studio 3-35
- Connection Types to Handle CORS 3-36
- Display Data from a REST Service 3-37
- Summary 3-38

4 Connecting to Data with Business Objects

- Objectives 4-2
- Data Sources in Visual Builder 4-3
- Introduction to Business Objects 4-4
- Creating Business Objects 4-5
- Create a New Business Object 4-6
- Create and Edit Fields 4-7
- Add a Field for Aggregating Data 4-8
- Work with Endpoints to Access Business Objects 4-9
- Create and Edit Business Object Relationships 4-10
- Work with Relationship Endpoints 4-12
- Using Groovy in Your Application 4-13
- Use Groovy to Create a Formula Field 4-14
- Use Groovy Functions 4-15
- Use Groovy to Access the Parent from the Child 4-16
- Use Groovy to Access a Parent's Collection of Children 4-17
- Printing and Viewing Groovy Diagnostic Messages 4-18
- Secure Business Objects 4-19
- Overview of Rules in Business Objects 4-21
- Create Rules for Business Objects 4-22

- Working with the Rules Editor 4-23
- Working with Object Functions 4-24
- View and Manage Data for Business Objects 4-25
- Manage Business Object Data During Development 4-26
- Import Data from a File with Data Manager 4-27
- Import Data from the Command Line 4-28
- Export Data from the Command Line 4-29
- Create Business Objects from a File 4-30
- Import New Business Objects 4-31
- Choose Your Own ID Column 4-32
- Change Field Data Type During Import 4-33
- What Is the Diagrammer? 4-34
- Modify the Diagram and Business Objects 4-35
- Create Relationships with the Diagrammer 4-36
- Control Data Caching for Business Objects 4-37
- Use Your Own Database Schema for Business Objects 4-38
- Summary 4-39

5 Anatomy of Visual Applications

- Objectives 5-2
- Agenda 5-3
- Basic Components and Building Blocks 5-4
- Anatomy of JET Single Page Applications (SPA) in VB 5-5
- VB Application Architecture Rests on JET 5-6
- Anatomy of Visual Applications 5-7
- Agenda 5-8
- Events Trigger Actions 5-9
- Work with Events and Event Listeners 5-10
- Types of Events: Components 5-11
- Types of Events: Life Cycle 5-12
- Types of Events: Variable 5-13
- Types of Events: Custom 5-14
- Create Event Listener and Select Action Chain 5-15
- Agenda 5-16
- Work with Action Chains 5-17
- Visual Builder Studio Built-in Actions 5-18
- Add Actions to the Chain 5-19
- Working with Large Action Chains 5-20
- Coding Action Chains 5-21
- Action Chain Scope 5-22
- Agenda 5-23

- Understand Variables and Scope 5-24
- Understanding Variables: Expressions 5-25
- Kinds of Variables 5-26
- Create a Custom Enumeration Type 5-27
- Built-In Variables 5-28
- Types and Variables 5-29
- Visual Builder Types 5-30
- Built-in Extended Types – Extends DataProvider 5-31
- Create Types from Endpoints 5-32
- ServiceDataProvider (SDP) Types and Variables 5-33
- Define Filter Criteria for SDP Variables 5-34
- Create Custom Types and Assign to Variables 5-35
- Add an Edit Page to a Selected Table Event 5-36
- Investigate How the Edit Page is Constructed 5-37
- Make a REST Call in an Action Chain 5-38
- Fire Notifications to Display Banners 5-39
- Agenda 5-40
- Page Flow and Navigation 5-41
- Navigate Between Pages 5-42
- Pass Variable Values by Mapping 5-43
- Pass Parameters Between Pages – Define Variables 5-44
- Pass Parameters Between Pages – Define Action Chain 5-45
- Embed a Flow Within a Page 5-46
- Agenda 5-47
- Use Fragments to Manage and Reuse Code 5-48
- Create and Use a Fragment 5-49
- Putting It All Together: Pass Data to a Fragment 5-50
- Create Fragment, Type, Variables, and Events 5-51
- Add Row Selection Event and Fragment 5-52
- Pass Fragment Data to Container 5-53
- Defer Rendering of a Fragment's Content 5-55
- Summary 5-56

6 Developing with Components

- Objectives 6-2
- Visual Builder UI Components 6-3
- VB Components Are JET Components 6-4
- JET Cookbook 6-5
- Work with the Component Exchange 6-6
- Install Components from the Component Exchange 6-7
- The Component Contract 6-8

- Properties Pane 6-9
- Work with JET Web Components 6-10
- Creating a Web Component 6-11
- The Components Palette 6-12
- Add a GUI Component to the Page 6-13
- Insert a GUI Component into the Structure Pane 6-14
- Add a Component to the Parent Slot 6-15
- Modify the Shell Page Header and Footer 6-16
- Modify the Header Icon and Text 6-17
- Bind Data to Components – Variables and Expressions 6-18
- Bind Data to Components – REST Endpoints 6-19
- Bind Data to Components – Quick Start Wizards 6-20
- Edit Table Columns 6-21
- Use Lists Instead of Tables 6-22
- Check Box and Radio Button Sets 6-23
- Comboboxes and Select Components 6-24
- Filter Queries with Selection Components 6-25
- Visualize Data Using Charts and Gauges 6-26
- Charts and Graphs Return Selected Items 6-27
- Use Gauges for Table Data 6-28
- Using Pop-Up Dialog Boxes 6-29
- Styling the Oracle Redwood Theme 6-30
- Override Redwood Styles 6-31
- Create and Use a Custom CSS Style Class 6-32
- Styling Components with JET Styles 6-33
- Using Responsive Styling 6-34
- Using Responsive Spacing in Visual Builder 6-35
- About Containers and Layout Components in Pages 6-36
- Layout Components 6-37
- Adding a Container to the Canvas 6-38
- Use Flex Containers for Responsive Designs 6-39
- Use Grid Containers for Fixed Layouts 6-40
- Use Form Layout for Form Data 6-41
- Components Respond at Run Time 6-42
- Components Respond at Design Time 6-43
- Work with Tabs in Mobile Apps 6-44
- Using Responsive Spacing for Mobile Apps 6-45
- Use Dynamic Components to Create Flexible Pages 6-46
- Create a Dynamic Component Based on Screen Size 6-48
- Create a Dynamic Component Based on User Role 6-50
- Create a Dynamic Component Based on a Parameter 6-51

Using Templates with Dynamic Components 6-52
Preview a Layout without Running the Page 6-53
Add JET Components to Visual Builder 6-54
Configuring the Train Component 6-55
Summary 6-56

7 Enhance Visual Builder Applications

Objectives 7-2
Build Queries with Components – Input Text 7-3
Build a Query – Use RowKey as Filter 7-4
Map rowKey to SelectedExpId 7-5
Populate Variables with Selected rowData 7-6
Fire Data Provider Event to Refresh Data 7-7
Use Cascading Selection Lists of Values (LOVs) 7-8
Filter Queries with Selection Components 7-9
Show Additional Data for Selection Components 7-10
Introducing the VBCookbook 7-11
Create a Visual Application for the VBCookbook 7-12
Use VBCookbook Recipes in Visual Builder 7-13
Important VBCookbook Recipes 7-14
Create and Use a Custom JavaScript Function 7-15
The JavaScript Editor 7-16
Adding Swipe Motions to Navigate in Mobile Apps 7-17
Make Strings Translatable 7-18
Download Bundles for Translation 7-19
Audit Your Application 7-20
Preview a Visual Application 7-21
Share a Visual Application 7-22
Apps Can be Staged and Published from VBCS or Shared and Deployed
from VBS 7-23
View Shared and Deployed Apps in VBS 7-24
View Staged and Published Apps in VBCS 7-25
Enable Progressive Web Application Functionality 7-26
Access Shared or Deployed PWA Apps from VBS 7-27
Install VBCS Staged or Published Apps 7-28
Work with Business Processes 7-29
Add a Business Process to an Application 7-30
Add a Process to an Action Chain 7-31
Summary 7-32

8 Building, Packaging, and Deploying Visual Applications

Objectives	8-2
Review Source Code with Merge Requests	8-3
Requestor Creates a Merge Request	8-4
A Word About Roles	8-5
Manage Your Visual Application With Git	8-6
Committed Work Is Pushed for Review	8-8
Resolve a Push Conflict	8-9
Reviewer Opens a Merge Request	8-10
Reviewer Views the Merge Request and Requests Attention	8-11
Reviewer Can See Commits and Changed Files	8-12
Reviewers Can Add an Inline Comment to a File	8-13
Reviewers and Developers Can Add a General Comment	8-14
Developer Addresses Merge Request Issues	8-15
Reviewers Approve or Reject a Merge Request	8-16
Developers Resolve a Merge Conflict	8-17
Merge Branches and Close the Merge Request	8-18
Merge Request Approved and Completed	8-19
Builds, Jobs, and Pipelines	8-20
Deploy Application – Build Jobs	8-21
VB Studio Visual Application Package and Deploy Steps	8-22
Deploy Options	8-23
Set a Version Number for Your Application	8-24
Application Version for Build Jobs	8-25
Specify a Custom App URL	8-26
Managing Business Objects Life Cycle	8-27
Manage a Visual Application	8-28
Undeploy a Visual Application	8-29
Set Version Information for Your Application	8-30
Export a Visual Application	8-31
Importing a Visual Application	8-32
Create and Track Issues in VB Studio	8-33
Use Agile Boards to Manage and Update Issues	8-34
Link Issues to Merge Requests	8-35
VB Studio Builds Do Most of the Grunt Work	8-36
Customize Your Builds Using Grunt	8-37
Build and Deploy Your Application	8-38

Grunt Tasks to Build Your Visual Application 8-39
Grunt Build Tasks 8-40
Customize Your Grunt Build Process 8-42
Override Existing Grunt Tasks 8-43
Optimize a Specific Web Application 8-44
Summary 8-45

A Switch to Your Own Database Schema for Business Objects

Data Sources for Business Objects in Visual Builder A-2
Build Business Objects on Your Own Database Instance A-3
Switch to Your Own Database Schema for Business Objects A-4
Create Business Objects from the New Schema A-6
Review and Modify Business Object Fields A-7
Add New Fields Based on Other Fields A-8
Use a Sequence for a Primary Key Field A-9
Change Tenant Database in Visual Builder A-10
Select Applications to Export A-11
New Database Tenant Displays A-12
Make Schemas Available to Applications A-13
Summary A-14
