

Contents

1 Course Introduction

- Objectives 1-2
- Audience and Course Duration 1-3
- Course Contents 1-4
- Hands-on Practices 1-5
- Summary 1-6

2 SBC Hardware

- Objectives 2-2
- SBC Platforms 2-3
 - Platforms and Software Products – AP 1100 2-5
 - Acme Packet 1100 Hardware Characteristics 2-6
 - Acme Packet 1100 Platform 2-7
 - Acme Packet 1100 Network Interfaces 2-8
- Platforms and Software Products – AP 3900 2-9
 - Acme Packet 3900 Hardware Characteristics 2-10
 - Acme Packet 3900 Platform 2-11
 - Acme Packet 3900 Network Interfaces 2-12
- Platforms and Software Products – AP 3950 & AP 4900 2-13
 - Acme Packet 3950 & 4900 Hardware Characteristics 2-14
 - Acme Packet 3950 & 4900 Platform 2-15
 - Acme Packet 3950 & 4900 Network Interfaces 2-16
- Platforms and Software Products – AP 4600 2-17
 - Acme Packet 4600 Hardware Characteristics 2-18
 - Acme Packet 4600 Platform 2-19
 - Acme Packet 4600 Network Interfaces 2-20
- Platforms and Software Products – AP 6300 & AP6350 2-21
 - Acme Packet 6300 & 6350 Hardware Characteristics 2-22
 - Acme Packet 6300 & 6350 Platform 2-23
 - Acme Packet 6300 & 6350 Network Interfaces 2-24
- Summary 2-25

3 Session Initiation Protocol Essentials

- Objectives 3-2
- Components of a Session 3-4

Session Initiation Protocol RFCs	3-6
Session Initiation Protocol Characteristics	3-7
Basic SIP Entities: User Agent (UA)	3-9
Basic SIP Entities: Servers	3-10
SIP Messages	3-11
SIP Message Parts	3-12
SIP Requests (Methods)	3-13
SIP Responses	3-14
Looking at the INVITE Message	3-15
The INVITE Message Essentials	3-16
Responses to the INVITE Message	3-18
Basic SIP Call	3-20
Media Setup	3-21
SDP (RFC 4566) Offer and Answer	3-22
Transactions and Dialogs	3-23
RFC 3261 Says:	3-24
Address of Record (AOR)	3-25
User Registration	3-26
Practice	3-27
Topic: Using SIP Proxies	3-28
SIP Proxy Function	3-29
A Common Scenario (a)	3-31
A Common Scenario (b)	3-32
Not all of Alice's days are lucky	3-33
A Closer Look	3-34
A Complete Scenario Example (a)	3-35
A Complete Scenario Example (b)	3-36
How a Stateless Proxy Works	3-37
How a Transaction-Stateful Proxy Works	3-38
How a Dialog-Stateful Proxy Works	3-39
All Proxy Types Example	3-40
Proxy versus B2BUA (a)	3-43
Proxy versus B2BUA (b)	3-44
Topology Information Hiding by B2BUA	3-45
Summary	3-46

4 Introduction to Session Border Controllers

Objectives	4-2
Terminology	4-4
Session Border Controllers	4-5
Integrated Signaling and Media Control	4-6

- SBC Functions 4-9
- Operating System Functions and Services 4-10
- Where Are SBCs Located? 4-15
- Release Naming Conventions 4-17
- Summary 4-18

5 SBC Setup

- Objectives 5-2
- Boot Process 5-4
- Boot-Parameters (bootparam) Example 5-6
- ACLI Modes 5-9
- Setting up the User Mode Password 5-10
- Setting up the Super-User Mode Password 5-11
- Product Setup (SBC or E-SBC) 5-12
- Configuring Initial Settings (E-SBC) 5-13
- Configuring SBC Initial Settings (E-SBC) 5-14
- Running setup if SBC/E-SBC has Existing Configurations 5-15
- Verifying Setup & Configuring entitlements - ACLI 5-17
- Verifying Setup & Configuring entitlements – ACLI 5-18
- Verifying Setup & Configuring entitlements – GUI 5-24
- Mapping Interfaces to MAC Addresses (Virtual Only) 5-29
- Swapping Interfaces for MAC Address Adjustment (virtual only) 5-31
- Viewing CPU Core Assignments (Virtual only) 5-32
- Practice 5-34
- Summary 5-35

6 Initial Configuration

- Objectives 6-2
- Connecting to the SBC for Management 6-4
- ACLI Modes 6-5
- Sample Screen (Superuser Mode) 6-6
- Sample Screen (Configuration Mode) 6-9
- ACLI Features (1 of 2) 6-10
- ACLI Features (2 of 2) 6-11
- File System – General Structure 6-12
- Some Common Commands - ACLI 6-13
- Accessing the GUI 6-15
- Configuration Assistant Operations 6-16
- Dashboard Tab 6-17
- Configuration Tab 6-19
- Monitor & Trace Tab 6-20

Widgets Tab	6-22
System Tab	6-23
Some Common Commands - GUI	6-24
Practice	6-25
Configuration Wheel (Branches & Elements)	6-27
Configuration Element Attributes	6-29
Configuration Elements Example	6-30
To Boot or Not to Boot Configuration Changes	6-31
Handling Configuration Elements	6-33
Creating a New Configuration Element	6-34
Creating a New Configuration Element - GUI	6-35
Viewing and Editing an Existing Element	6-36
Viewing an Existing Element - GUI	6-37
Editing an Existing Element - GUI	6-38
Copy – Paste-Config	6-39
Copy - GUI	6-40
Deleting a Configuration Element	6-41
Deleting a Configuration Element - GUI	6-42
Discard - GUI	6-43
The done Command	6-44
The done Command – Error 409	6-45
The ok Command	6-46
What's Next?	6-47
Exiting Configuration Mode	6-48
The verify-config Command	6-49
The verify-config Command - GUI	6-50
Saving and Activating Configurations	6-51
Saving and Activating Configuration - GUI	6-53
The Complete Workflow	6-54
Practice	6-56
Configuration Backup/Restore	6-57
Where are Configurations Stored?	6-58
Configuration Version - GUI	6-59
General	6-60
The backup Command	6-61
The restore Command	6-62
Commands and Actions	6-63
Configuration Backup- GUI	6-65
Configuration Restore - GUI	6-66
Practice	6-67
Beginning from the Beginning	6-69

- Deleting The Configuration – delete-config 6-70
- The Global System Settings 6-71
- Configuring SIP Monitoring 6-72
- Practice 6-74
- Summary 6-75

7 Provisioning Interfaces

- Objectives 7-2
- Configuration Wheel (Branches & Elements) 7-4
- Configuration Element View 7-5
- Logical Binding 7-6
- The phy-interface in General 7-8
- The phy-interface Configuration Element (1 of 2) 7-9
- The phy-interface Configuration Element (2 of 2) 7-10
- The phy-interface Configuration Element - GUI 7-11
- The network-interface in General 7-13
- Important Aspect 7-15
- The network-interface Configuration Element – Main Parameters 7-16
- The network-interface Configuration Element - GUI 7-17
- Interfaces' Default Behavior 7-19
- Enabling Management Protocols 7-20
- Enabling Management Protocols - GUI 7-21
- Note – Removing ssh-address 7-22
- Interfaces Status Check – ACLI 7-24
- Lookup Table – show nat in-tabular 7-25
- Interfaces Status Check - GUI 7-26
- Lookup Table – show nat in-tabular - GUI 7-27
- Practices 7-29
- Summary 7-30

8 Signaling & Media Services

- Objectives 8-2
- What Is a Realm? 8-4
 - Realm Bridging 8-5
- Peering Model 8-6
- Access-Backbone Model 8-7
- Configuration Wheel (Branches & Elements) 8-8
- Configuration Element View – realm-config 8-9
- Creating a Realm Configuration Element 8-10
- Creating a Realm - GUI 8-11
- Configuration Elements View 8-12

Practice	8-13
Configuration Wheel (Branches & Elements)	8-15
The media-manager-config Element	8-16
The media-manager-config Element - GUI	8-18
Media Proxy Function	8-19
Media Packets Path (Conceptual View)	8-20
The steering-pool Configuration Element	8-21
How Is Media Steered to the SBC?	8-22
Configuring steering-pool Element	8-23
Configuring steering-pool Element - GUI	8-24
Configuration Element View	8-25
Call Admission Control Based on steering-pools	8-26
Example: steering-pools and Sessions	8-27
Practice	8-28
Configuration Wheel (Branches & Elements)	8-30
The sip-config Element	8-31
The sip-config Element - GUI	8-32
SIP Edge Proxy Function	8-33
Edge Proxy – sip-interface	8-34
Signaling Packets Path (Conceptual View)	8-35
Configuring sip-interface Element	8-36
Configuring sip-interface Element - GUI	8-37
Configuration Element View	8-38
Practice	8-39
Summary	8-40

9 Routing, Session Agents & Access Control

Objectives	9-2
Routing	9-3
Policy-Based Realm Bridging (PBRB) in Peering Environment	9-4
Configuration Wheel (Branches & Elements)	9-5
The local-policy Element	9-6
The local-policy Configuration Element	9-8
The local-policy Element - GUI	9-10
Routing Decision	9-11
Example 1 – local-policy Configuration	9-12
Example 2 – local-policy Configuration	9-13
Example 3 – local-policy Configuration	9-14
Example 4 – local-policy Configuration	9-15
Basic Configuration Elements for a Peering Environment	9-16
Quiz 1	9-18

Quiz 2	9-20
Practice	9-21
Configuration Wheel (Branches & Elements)	9-23
Configuration Element	9-24
Session Agent: General	9-25
Session Agents in Peering Environment	9-26
Configuring The session-agent Element	9-27
Configuring The session-agent Element - GUI	9-29
Session Agent Groups	9-30
Configuring The session-group (SAG) Element	9-31
Configuring The session-group (SAG) Element - GUI	9-33
addr-prefix and allow-anonymous	9-35
SIP Peering Common Settings	9-36
Access Control – Scenario 1	9-37
Access Control – Scenario 2	9-38
Quiz 3	9-39
Practice	9-41
Summary	9-42

10 Header Manipulation Rules (HMR)

Objectives	10-2
What is Translation?	10-4
Translation “For Dummies”	10-5
Configuration Wheel (Branches & Elements)	10-6
Terminology	10-7
Header Manipulation Rules: General	10-8
The sip-manipulation Configuration Element	10-9
Where Are HMRs Performed?	10-10
The header-rule Parameters and Logic	10-11
header-rule Examples	10-12
The element-rule Logic	10-13
Referencing Elements in a Header	10-14
Example of parameter-name in a SIP Header	10-15
Example: The Need for an Element Rule	10-16
Example: The Solution	10-17
Configuring sip-manipulation - GUI	10-18
Applying Rule Sets	10-19
Quiz 1	10-20
Header Manipulation Rules In A Policy-Based Realm Bridging (PBRB) – Peering Environment	10-23
Configuration Element	10-24

Example: Applying HMRs 10-25

Quiz 2 10-26

Practice 10-28

Summary 10-29

11 Configuring High Availability

Objectives 11-2

Configuration Wheel (Branches & Elements) 11-4

Architecture 11-5

Operation 11-6

Alarm Subsystem Components 11-7

High Availability Terminology 11-8

Review of the Key Points 11-9

Quiz 1 11-10

Cluster Operational Addresses 11-13

Cluster Utility Addresses 11-14

Events Triggering Failover 11-15

Cluster Failover and Transparency 11-16

Example of Cluster Addresses 11-17

Selecting Virtual MAC Addresses (physical SBCs) 11-19

Finding Out Virtual MAC Addresses (virtual SBCs) 11-20

The Logic Behind The Configuration 11-21

High Availability Configuration Elements (1 of 2) 11-22

High Availability Configuration Elements (2 of 2) 11-23

Quiz 2 11-24

Assumptions 11-27

High Availability Configuration Workflow 11-28

Steps 1 to 3 11-29

Step 4a: Cabling the Cluster (physical SBCs) 11-30

Step 4b: Synchronizing SBCs' time (NTP sync) 11-31

Step 5: Configuring the Primary SBC 11-32

Step 5a: Configuring Virtual MAC (physical SBC) 11-33

Step 5a: Configuring Virtual MAC (virtual SBC) 11-34

Step 5b: Configuring Utility Addresses 11-35

Step 5c: Defining a Secondary Gateway 11-36

Step 5d: Configuring wancom1 and wancom2 phy-Interfaces 11-37

Step 5e: Control Interface Configuration Guidelines 11-38

Step 5e: Adding wancom1,2 Network Interfaces 11-39

Step 5f: Configuring the redundancy Element 11-40

Step 5fa: Configuring the peers Sub-Element 11-42

Step 5fb: Configuring the destinations Sub-Element 11-43

Quiz 3 11-44

Secondary Node Preparation Workflow 11-47

Configure Target Name and IP Address (wancom0) 11-48

Configure Passwords , Setup Product, Entitlements and Verify Features 11-49

Acquiring Configuration and Rebooting 11-50

Node States 11-52

The show health Command 11-53

Manual Switchover 11-54

Summary 11-55
