Building Microservice Platforms with TARS (LFS153x)

Get an introduction to microservices and the TARS framework. In this course you will learn how to efficiently develop microservices programs using different programming languages and quickly deploy the corresponding services into applications.

Duration: 3 Days

Prerequisites for this course

- Linux Command Line Interface (CLI)
- Basic knowledge of Docker and Kubernetes
- Basic knowledge of MySQL
- Programming languages: C++, Golang, PHP, etc.

Outline for this course

Chapter 1 – Introduction to Microservices and TARS

Chapter 2 – TARS Environment Setup

Chapter 3 – Fundamentals of TARS

Chapter 4 – Hello World (Build your first service in TARS)

Chapter 5 – System Configuration from the Graphical Interface
