

Getting more from Jira workflows Live Team Training

Duration: 8 hrs

Course Objective: This course helps your team **improve your processes** by creating custom workflows. They'll learn **advanced workflow features** like conditions, validators, post functions, triggers, and status and transition properties. They'll also learn how to deal with **complex workflow requirements** and learn best practices for creating and managing workflows. The concepts taught in this course apply to all Jira products.

Pre-requisite: Before taking this course, we suggest your team takes Jira Administration Part 1 ([Cloud](#) or [Data Center](#)), [Jira Administration Part 2](#), or has equivalent experience.

Lab Details: Free Trail of JIRA Cloud
