Introduction to Cloud Foundry (LFD132x)

This course explains what Cloud Foundry is and why it should be used. The course starts by highlighting the main use cases for the Cloud Foundry platform, and then discusses the relationship between Cloud Foundry and Kubernetes before providing an immersive, hands-on experience that can be completed by anyone. The course also explores the features and capabilities of Cloud Foundry, highlighting the impact from three perspectives: developers, operations, and security and compliance teams.

Duration: 2 Days

Prerequisites for this course
- Little to no Cloud Foundry experience.

Outline for this course

Chapter 1 – Introduction to Cloud Foundry

Chapter 2 – Developer Concerns

Chapter 3 – About the Project
