Plans in Jira Software

Duration: 8 hrs

Course Objective: This course will give your team a broad overview of the features of Plans in Jira Software to create and manage reliable plans. They'll also learn how *auto-scheduler* can be used to build Plans, and then how to experiment with "what-if" scenarios — adjusting scope, resources, and time — to improve their long-term planning effectiveness. Your team will gain confidence to forecast plans across multiple projects before committing them to your teams' Jira boards.

Pre-requisite: Before taking this course, we suggest your team completes Jira Essentials with Agile Mindset or have equivalent Jira and agile development experience.

Lab Details: Free Trail of JIRA Cloud

Topics Covered

Course overview

Getting Started with Advanced Roadmaps for Jira

Advanced Roadmaps and Auto-schedule

Working with Dependencies

Managing Quarter Plans for Agile Teams

Working with Releases and Scenarios

Working with Teams
