

QlikView Data Architect

Course Duration: 16 Hours(2days)

Course Description:

Explore the fundamentals of QlikView in this comprehensive training program. Starting with an introduction to Qlik and its significance, you'll delve into data loading techniques, model architecting, and debugging/validation. Learn how to associate tables, transform data, create a master calendar, and handle data model issues effectively.

Prerequisites:

- Basic understanding of data concepts and familiarity with Business Intelligence (BI) principles.
- Experience with data analysis or working with spreadsheets, such as Excel.

Table of Content

Module 1: Getting Started

- Why Qlik?
- Getting Started with QlikView

Module 2: Load Data

- Data Load Basics
- Load Data from a Database

Module 3: Model Architecting

- Associating Tables and Transforming Data
- Creating Data During Reload
- Generating a Master Calendar
- Combining Tables – Joins
- Combining Tables – Concatenation
- Combining Tables – Mapping

Module 4: Debugging and Validating

- Resolving Data Model Issues
- Debugging the Script
- Validating the Model
