Appian Foundations

Course Duration: 24 hours

Course Description:

This course is designed for business users who are working to gather requirements and plan applications. They will learn how to communicate effectively with Appian Developers throughout the application lifecycle. You'll learn the terms, tools, and objects that make up an app and see how to leverage Appian for mocking-up user interfaces and diagramming business workflows.

Course Objectives:

In this course, you will –

- Recall Appian terminology
- Identify the key benefits and uses of Appian
- Distinguish best use cases for Appian
- Describe a simple application lifecycle
- Identify the purpose of each main Appian design object
- Evaluate organizational opportunities to use Appian
- Communicate application requirements to design teams
- Recall common Agile ceremonies and roles of each non-technical member

Table of Content

Module 1: Appian Basics

- What is Appian?
- Appian Essentials

Module 2: Get Started with Designing an App

- Application Architecture
- Personas and Groups
- Data Design and Records
- Records Design
- Process Models
- Reports
- Create an App

Module 3: Introduction to Delivery Methodology

- Agile Development Practices
- Initiate a Project
- Build Phase
- Release and Optimize

Module 4: Initiate and Build Appian Applications for Analysts

- Gathering Requirements
- Creating User Personas
- Writing User Stories
- Planning Releases

Module 5: BPMN and Modelling Processes

- Define Business Process Model and Notation (BPMN)
- Components used for Standard Diagramming
- Example Process in Appian
- Introduction to Appian Automation

Module 6: UI Design Best Practices

- Get Started with UI Design
- Choose the Right Layouts
- Component Best Practices
- Colors and Branding
