

Unix Fundamentals

This document provides the curriculum outline of the Knowledge, Skills and Abilities that a Unix administrator can be expected to demonstrate.

Duration: 5 Days

Hands-On Format: This hands-on class is approximately 80/20 lab to lecture ratio, combining engaging lecture, demos, group activities and discussions with comprehensive machine-based practical programming labs and project work.

Lab: Koenig DC

Module 1 - Introduction to the Unix Operating System

A brief history of UNIX

The UNIX kernel

The UNIX file system

Getting started navigating the file system

The file system structure

Directories and files

Pathnames

Navigating the file system

Module 2 - Basic commands

Command line syntax

Basic file handling commands

Basic Directory handling commands

Filename wildcard characters

Module 3 - Redirection and Pipes

Input redirection

Output redirection

Pipes

Module 4 - Introduction to the Vi editor

Overview of the vi editor

Basic functions

Switching to input mode

Other useful commands

Exercises: Using the vi editor

Module 5 - Searching and replacing text

Searching and replacing text using the vi editor

Using regular expressions (regex)

Using sed for search and replace

Searching for text with grep, egrep and grep

Module 6 - Recalling and editing commands

Overview

The bash shell

The korn shell

Module 7 - File permission and access control

Users and user groups

File access permissions

Changing file attributes

Switching users and user groups

Linking files

Module 8 - Filtering Text

Overview

The cut command

An introduction to awk

The ni command

Module 9 - Processes

What is a process?

Monitoring processes

Killing processes

Background processes

Job Control

Grouping commands

Module 10 - The user environment

Customising the profile or .bash_profile

Customising the .kshrc or .bashrc

Module 11 - More basic commands

The find command

Using xargs command

The locate command

The df command

The cut command

The sort command

Finding duplicate content

The finger and pinky commands

Module 12 - Getting started with shell script

What is a shell script?

Development guidelines

Creating and editing shell scripts

Naming and storing shell scripts

Executing shell scripts

Module 13 - Using variables

Environment variables

Local variables

Assigning values to variables

Assessing variable values

Using quotes

Delimiting variable names

Echo control sequences

Module 14 Hard-Disk

Adding hard disk

Creating partition, filesystem, mount point etc

Module 15. LVM

What is LVM

Creating lvm

Module 16 – Script

Using expr, read, if, test

Loop {while, until, for}
