

Contents

1 Oracle SBC Advanced Configuration

- Objectives 1-2
- About the Course 1-3
- Course Contents 1-4
- Hands-On 1-5
- Summary 1-6

2 Advanced Header Manipulation Rules

- Objectives 2-2
- The Concept of Header Manipulation Rules 2-3
- HMR Capabilities and Benefits (1 of 2) 2-4
- HMR Capabilities and Benefits (2 of 2) 2-5
- HMR Terminology Used in This Lesson 2-6
- Example: Header Rule and Element Rule 2-7
- HMRs on the SBC (Static) 2-8
- HMRs on the SBC (Dynamic) 2-9
- Ruleset Guidelines 2-10
- Logical Processing Path for New Requests 2-11
- Basic Header Manipulation Rules 2-13
 - sip-manipulation Element 2-14
 - name Parameter 2-15
 - header-rule sub-element 2-16
 - header-rules Guidelines 2-17
 - header-name Parameter 2-18
 - The action Parameter - header-rule (1 of 2) 2-19
 - The action Parameter - header-rule (2 of 2) 2-20
 - The comparison-type Parameter - header-rule 2-21
 - The msg-type Parameter - header-rule 2-22
 - msg-type - out-of-dialog (in-manipulation) 2-23
 - msg-type - out-of-dialog (out-manipulation) 2-24
 - The methods Parameter - header-rule 2-25
 - The match-value Parameter - header-rule 2-26
 - The new-value Parameter - header-rule 2-27
- element-rule sub-element 2-28
- element-rules Guidelines 2-29

Referencing “Types” in a Header 2-30

The name Parameter - element-rule 2-31

The parameter-name Parameter - element-rule 2-32

The type Parameter Value: header-value (1 of 12) 2-33

The type Parameter Value: header-param (2 of 12) 2-34

The type Parameter Value: header-param-name (3 of 12) 2-35

The type Parameter Value: uri-user (4 of 12) 2-36

The type Parameter Value: uri-user-only (5 of 12) 2-37

The type Parameter Value: uri-phone-number-only (6 of 12) 2-38

The type Parameter Value: uri-host (7 of 12) 2-39

The type Parameter Value: uri-display (8 of 12) 2-40

The type Parameter Value: uri-param (9 of 12) 2-41

The type Parameter Value: uri-user-param (10 of 12) 2-42

The type Parameter Value: status-code (11 of 12) 2-43

The type Parameter Value: reason-phrase (12 of 12) 2-44

The action Parameter - element-rule (1 of 2) 2-45

The action Parameter - header-rule (2 of 2) 2-46

Built-In Variables (1 of 5) 2-47

Built-In Variables (5 of 5) 2-51

Configuring One HMR per Peer or per Customer (1 of 2) 2-52

Configuring One HMR per Peer or per Customer (2 of 2) 2-53

Example: Deleting a Header 2-54

Example: Change a Contact User uri-param 2-55

Example: Modifying a SIP Response 2-56

Applying Rulesets 2-57

test-sip-manipulation 2-58

test-sip-manipulation – load-sip-message 2-59

test-sip-manipulation – refresh-manipulations 2-60

test-sip-manipulation – sip-manipulation 2-61

test-sip-manipulation - execute 2-62

move Command 2-63

Built-In Ruleset 2-64

Practices 2-65

Introduction to Regular Expressions 2-66

What Are Regular Expressions? 2-67

Literals and Meta Characters 2-68

Meet the Meta Characters! 2-69

Meta Character Types 2-70

Examples 2-71

Useful Classes 2-72

Quantifiers 2-73

Example: Grouping and Quantifiers 2-74
Using the | Meta Character 2-75
Using Anchors 2-76
Beware! Regex Engines Are Greedy! (1 of 2) 2-77
Beware! Regex Engines Are Greedy! (2 of 2) 2-78
Addressing The Greed (1 of 2) 2-79
Addressing The Greed (2 of 2) 2-80
Constructing a Useful Regex 2-81
Capturing Matches 2-82
test-pattern-rule 2-83
Testing Regular Expressions - test-pattern-rule 2-84
Practice 2-85
Advanced Header Manipulation Rules 2-86
Introduction to Regex HMR 2-87
Example: Simple Regex 2-88
comparison-type & match value Regex Parameters 2-89
Regex - String Grouping 2-90
Boolean Operators 2-91
Equality Operators 2-92
Examples 2-93
Boolean Results (1 of 2) 2-94
Boolean Results (2 of 2) 2-95
Boolean Results – Example 2-96
Regex – Duplicate Headers (route / via) 2-97
store and match-value Regex Parameter 2-98
Example - store and copy Regex 2-99
Example - False Boolean Regex 2-100
MIME Support – Message Body 2-101
find-replace-all action - Modifying the Message Body 2-102
Escaped Characters – MIME Manipulation 2-103
Subgroups [[:n:]] 2-104
\$CRLF – Built-in-Variable 2-106
mime-sdp-rules - SDP Manipulation 2-107
mime-sdp-rules – sub-elements 2-108
sdp-session-rule 2-109
sdp-media-rule 2-110
sdp-line-rule – sub-element 2-112
A Few Tips... 2-113
Manipulating SDP Example 2-114
HMR for XML 2-115
HMR Development Considerations and Tips 2-116

HMR Development Considerations (1 of 2)	2-117
HMR Development Considerations (2 of 2)	2-118
HMR Development Tips (1 of 2)	2-119
HMR Development Tips (2 of 2)	2-120
Practices	2-121
HMR for SIP-ISUP	2-122
HMR for SIP-ISUP: Overview	2-123
HMR for SIP-ISUP – Example1	2-124
HMR for SIP-ISUP Example2	2-125
HMR for SIP-ISUP – Example3	2-127
HMR for SIP-ISUP – Example4	2-128
ISUP Encode/Decode Formats	2-129
Summary	2-130

3 Routing

Objectives	3-2
SBC Logical Packet Processing and Routing Options	3-3
Operating System Functions and Services	3-4
Logical Processing Path for New Requests	3-5
The SBC Routing Options (1 of 2)	3-6
The SBC Routing Options (2 of 2)	3-7
Routing - local-policy	3-9
local-policy element	3-10
Lookup Keys (1 of 2)	3-11
Lookup Keys (2 of 2)	3-12
Determining the Ingress Realm	3-13
policy-priority Parameter	3-14
policy-attribute Sub-element	3-16
How Does the SBC Choose an Egress Realm?	3-18
cost Attribute - Routing by Cost	3-19
Routing by Cost - Example	3-20
media-profile Attribute - Routing by CODEC	3-21
Routing by CODEC - Example	3-22
Routing by Time of Day and Day of Week	3-23
Routing by Time of Day / Day of Week – Example (1 of 2)	3-24
Routing by Time of Day / Day of Week – Example (2 of 2)	3-25
Recursion in Local Policies	3-26
test-policy Command - Routing	3-27
Practices	3-28
session-agent Element	3-29
session-agent	3-30

session-agent - Constraints 3-31
session-agent - Timers 3-32
session-agent Constraints - Example 3-33
session-groups (SAG) - Load Balancing 3-34
session-group / session-agent - recursion 3-35
rate-constraints sub-element – Method Throttling (1 of 3) 3-36
rate-constraints sub-element – Method Throttling (2 of 3) 3-37
rate-constraints sub-element – Method Throttling (3 of 3) 3-38
session-agent – Monitoring Health 3-39
Practices 3-43
Additional Route Handling 3-44
redirect-action maddr Resolution (1 of 2) 3-45
redirect-action maddr Resolution (2 of 2) 3-46
redirect-action Parameter 3-47
redirect-action Values 3-48
redirect-action = proxy - Example 3-49
redirect-action = recurse - Example 3-50
redirect-action = recurse-305-only - Example 3-51
Embedded Routes in Redirect Responses (1 of 2) 3-52
Embedded Routes in Redirect Responses (2 of 2) 3-53
Static Flows 3-54
How Static Flows Work 3-56
static-flow Configuration 3-57
Summary 3-58

4 Dynamic Routing

Objectives 4-2
Configuring DNS 4-3
DNS – Basic Example 4-4
DNS Queries - NAPTR, SRV, and A / AAAA 4-5
NAPTR 4-6
SRV 4-7
A / AAAA 4-8
SIP DNS Query – Example 4-9
DNS Query Procedure 4-10
Configuring DNS on the SBC 4-11
Default DNS Lookup 4-12
Increasing Flexibility – DNS Lookup 4-13
dns-realm Configuration 4-14
DNS Application Layer Gateway (ALG) 4-15
dns-config Element 4-16

DNS-SRV Session-Agent Recursion Error Handling 4-18

Configuring ENUM 4-19

ENUM – E.164 NUmber Mapping 4-20

ENUM – with the SBC and Session Router 4-22

Translating the Telephone Number 4-23

enum-config Element 4-24

Triggering ENUM Lookup – local-policy Element 4-26

ENUM Lookup Keys 4-27

NAPTR Records 4-28

How ENUM Works on the SBC 4-29

More ENUM Supports on the SBC (1 of 2) 4-30

More ENUM Support on the SBC (2 of 2) 4-31

sip-config Parameters 4-32

show enum rate Command 4-33

show enum Command 4-34

Configuring Local Routing Tables (LRT) 4-35

What Are Local Routing Tables (LRTs)? 4-36

LRT Performance 4-37

How Does LRT Work? (1 of 2) 4-38

How Does LRT Work? (2 of 2) 4-39

Example: LRT File 4-40

Example: LRT File Using Ranges 4-41

Multi-Tiered LRT Route Selection 4-42

Example: Multi-Tiered LRT File 4-44

Configuring LRT on the SBC 4-45

local-routing-config Element 4-46

local-routing-config match-mode all Parameter 4-48

Triggering LRT Lookup in local-policy Element 4-49

Compound Key LRT Lookup 4-50

local-routing-config string-lookup Parameter 4-51

LRT - Redirected Egress Realm 4-52

LRT - Embedded Route Header 4-53

Practice 4-54

Topic: Multistage Routing 4-55

Multistage Routing 4-56

Enabling Multistage Routing 4-57

Global local-policy Termination - Multistage Routing 4-58

next-key Parameter 4-59

Configuring local-policies for Multistage Routing 4-60

Example: Multistage Routing 4-61

Practice 4-63

Summary 4-64

5 Advanced Media Handling

Objectives 5-2

Media Concepts 5-3

Media NAT/Relay Function 5-4

Enabling Media Processing on the SBC 5-5

Media Processing 5-6

MiddleBox Control Daemon (MBCD): Overview 5-7

MBCD Terminology 5-8

Call Flow - MIBOCO Transactions 5-9

SIP Message and MIBOCO Transaction - example 5-11

How Does MBCD Process a Request? 5-12

Building the NAT Entries in the Lookup Table 5-14

Lookup Table – show nat info 5-15

Lookup Table Entries – show nat in-tabular (1/3) 5-16

Lookup Table Entries – show nat by-addr (2/3) 5-17

Lookup Table Entries – show nat by-index (3/3) 5-18

Call On-Hold Methods 5-19

Practices 5-20

Anchoring and Releasing Media 5-21

When Does the SBC Anchor or Release Media? 5-22

Configuring the Manage Media Parameters for Media Handling 5-24

Example – mm-in-system 5-25

Example: mm-in-network 5-26

Example: mm-in-realm 5-27

Example: mm-same-ip 5-28

delayed-media-update Parameter – realm-config Element (1 of 2) 5-29

delayed-media-update Parameter – realm-config Element (2 of 2) 5-30

Practice 5-31

Media Latching 5-32

Latching 5-33

Latching Flows 5-34

Restricted Latching 5-35

Symmetric Latching 5-36

Symmetric Latching - Behind NAT FW (1 of 2) 5-37

Symmetric Latching - Behind NAT FW (2 of 2) 5-38

Scenario: Symmetric Latching 5-39

Scenario: Symmetric Latching (1 of 2) 5-40

Scenario: Symmetric Latching (2 of 2) 5-41
Client and NAT Requirements for Hosted NAT Traversal (HNT) 5-42
Early Media Suppression (1 of 2) 5-43
Early Media Suppression (2 of 2) 5-45
Practice 5-46
Call Admission Control (CAC) on Media 5-47
User-Based Call Admission Control (CAC) 5-48
Session-Based Call Admission Control (CAC) 5-49
Steering Pools 5-50
Configuring steering-pool Element 5-51
Bandwidth-Based CAC 5-52
Nested Realms 5-53
Nested Realm Types 5-54
Nested Realm Group 5-55
Bandwidth-Based CAC on the Nested Realm Groups 5-56
Guidelines for Nested Realms 5-57
Bandwidth CAC for Media Release bw-cac-non-mm Parameter 5-58
Viewing MBCD Per-Realm Statistics 5-59
Media Profiles 5-60
Call Admission Control & Policing 5-61
Media Traffic Shaping (Logical View) 5-62
Configuring Media Profiles 5-63
Default Media Profiles 5-64
Configuring Media Profiles with Media Subtype 5-65
Configuration Restrictions – media-profile subtype 5-66
subname Syntax with Wildcard Character 5-67
Practices 5-68
Quality of Service (QoS) and Codec Policies 5-69
QoS Measurements 5-70
TOS Byte 5-71
DiffServ Byte (1 of 2) 5-72
DiffServ Byte (2 of 2) 5-73
Configuring Media Policy on the SBC 5-74
Accounting – Using RADIUS 5-75
Call Detail Records (CDRs) 5-76
Acronyms in CDRs 5-77
Attributes in SBC CDRs 5-78
VSA ID Range Selection 5-80
Configuring Specific Attributes for CDR Inclusion 5-81
CDRs Customized Values by HMRs 5-82
Codec Policies and Conditional Codec Policies 5-83

codec-policy Element 5-84
Conditional Codec Policies 5-86
Conditional Codec Operators 5-87
Practices 5-88
Summary 5-89
