

Blender – 3D Modelling and Animation

Table of Contents

1. Getting Started with Blender

- Introduction to Blender and Its Interface
- Navigating the 3D Viewport
- Understanding Objects, Meshes, and Transforms

2. Basic 3D Modeling

- Essential Modeling Tools (Extrude, Loop Cut, Bevel)
- Modeling Simple Objects: A Table and a Chair
- Using Modifiers to Improve Models

3. Adding Colors and Textures

- Introduction to Materials and Shaders
- Applying Basic Colors and Textures
- Using Images to Add Realistic Textures

4. Introduction to Animation

- Understanding Keyframes and the Timeline
- Creating a Simple Bouncing Ball Animation
- Basics of Object Movement and Rotation

5. Working with Lights and Rendering

- Adding and Adjusting Lights in a Scene
- Introduction to Eevee and Cycles Render Engines
- Rendering a Final Image

6. Using Particle Effects

- Introduction to Blender's Particle System

- Creating Simple Effects Like Sparks and Snow
- Adjusting Particle Settings for Realism

7. Basic Physics Simulations

- Understanding Rigid Body Physics
- Simulating a Falling Ball and a Swinging Flag
- Simple Cloth and Soft Body Effects

8. Introduction to UV Mapping

- What is UV Mapping and Why It's Important
- Unwrapping a Model for Texturing
- Applying Custom Textures to Objects

9. Adding 3D Models to Real Footage

- Importing a Video Background into Blender
- Matching 3D Lighting with Real Footage
- Using HDRI for Realistic Reflections

10. Exporting and Sharing Your Work

- Exporting Models for 3D Printing or Game Engines
- Saving and Rendering an Animation
- Sharing Your Blender Creations
