

MobileIron Core Fundamentals V10.2

Course Duration: 24 Hours (3 Days)

Overview

The MobileIron Core Fundamentals V10.2 certification is a professional credential that showcases a user's competency in Mobile device management. It is all about understanding and utilizing the MobileIron platform, which provides comprehensive security for business data accessed from mobile devices. Industries use this certification to validate their employees' skills in managing and protecting company data on smartphones and tablets. The certification covers basic concepts like Device registration, App management, Email configurations, security, and privacy controls. Achieving MobileIron Core certification also demonstrates one's ability to troubleshoot common issues and implement best practices for Mobile device management.
