Overview

The Palo Alto Networks Certified Network Security Engineer (PCNSE) is a formal, third-party proctored certification that indicates those who have passed it possess the in-depth knowledge to design, install, configure, maintain and troubleshoot the vast majority of implementations based on the Palo Alto Networks platform. The PCNSE exam should be taken by anyone who wishes to demonstrate a deep understanding of Palo Alto Networks technologies, including customers who use Palo Alto Networks products, value-added resellers, pre-sales system engineers, system integrators, and support staff.

Intended Audience

This exam will certify that the successful candidate has the knowledge and skills necessary to implement Palo Alto Networks security platform V7 in any environment and understands the next generation security platform. This exam will **NOT** cover Aperture, Traps and AutoFocus

Qualifications

Experience:

Three to five years working in the Networking or Security industries.
The equivalence of 6 months' experience working full-time with Palo Alto Networks security platform.

Skills Required

- Candidate can plan, deploy, configure and troubleshoot Palo Alto Networks Security platform components
- Candidate has product expertise and understands the unique aspects of the next generation security platform and how to deploy one appropriately.
 - Candidate understands Palo Alto networking and security policies

Recommended Training

Palo Alto Networks strongly recommends, you attending our Firewall: Install Configure and Manage (201), Firewall: Configure Extended Features (205), and Panorama: Manage Multiple Firewalls (221), Firewall: Manage Cyber threats (231) and Firewall: Debug and Troubleshoot (311) classes. Courses do not cover everything that a PCNSE7 needs to know, but they're the most efficient way to start learning. When you have the basics mastered, you should spend time on our platform practicing using the information in the 7.0 versions of the Administrator's Guides.

Blueprint Objectives:

Objectives summarize what the test is designed to measure. Objectives are developed by Exam Developers and Subject Matter Experts based on identified tasks that relate that the successful candidate has the knowledge and skills necessary to implement Palo Alto Networks Next Generation Firewall platform in any environment and understands the next generation security platform. Once the initial development process is complete, these objectives are verified using an external group of individuals in the actual job role. The external survey determines the number of questions for each objective, which relates directly to the criticality of the task in the job role.

Prior to taking this exam, candidates should understand each of the following objectives. Each objective is listed below; along with related tools the candidate should have experience with, and related documentation that contains information relevant to the objective. All objectives may also be referenced in other product documentation not specifically highlighted below. The candidate should be familiar with all relevant product documentation or have an equivalent skillset.

Architecture and Design

- Identify how Palo Alto Networks products work together to detect and prevent threats.
- Given a scenario, architect a solution to meet the business requirements leveraging the security platform.
- Evaluate high availability (HA) designs and configurations for various deployments.
- Identify the appropriate interface type and configuration for a specified network deployment.
- Identify strategies for retaining logs using Distributed Log Collection.
- Identify how to design a scalable solution for administering Palo Alto Devices using Panorama.
- Identify deployment strategies for virtualized environments.
