

# DO346

## Migrating Virtual Machines to Red Hat OpenShift Virtualization with Ansible Automation Platform

### Course Description

**Learn the essential skills to migrate virtual machines to Red Hat OpenShift Virtualization.**

*Migrating Virtual Machines to Red Hat OpenShift Virtualization with Ansible Automation Platform (DO346)* provides the essential knowledge to migrate virtual machines to Red Hat OpenShift Virtualization by using carefully selected content from *Managing Virtual Machines in Red Hat OpenShift Virtualization (DO316)* and *Automate and Manage Red Hat OpenShift Virtualization with Ansible (DO336)*. This course provides a shorter learning path for IT professionals to migrate their virtualized workloads to OpenShift Virtualization.

### Recommended training

- [Take our free assessment](#) to gauge whether this offering is the best fit for your skills
- This course requires no previous experience with containers, Kubernetes, OpenShift, or OpenShift Virtualization; however, learners are encouraged to attend the following courses, before taking DO346:
  - [Containers, Kubernetes and Red Hat OpenShift Technical Overview \(DO080\)](#)
  - [Red Hat OpenShift Virtualization Technical Overview \(DO016\)](#)
  - [Ansible Basics: Automation Technical Overview \(DO007\)](#)
- Although Linux skills are not required for managing OpenShift clusters and OpenShift Virtualization, operating individual Linux VMs requires Linux system administration skills that the following courses provide:
  - [Red Hat System Administration I \(RH124\)](#) and [Red Hat System Administration II \(RH134\)](#) for managing the operating system inside a Linux VM

## **Course Outline**

### **Red Hat OpenShift Virtualization**

Distinguish Red Hat OpenShift Virtualization from container technologies and from traditional virtual machine technologies. Describe the features and use cases of OpenShift Virtualization. Deploy the OpenShift Virtualization operator in an existing Red Hat OpenShift environment.

### **Configuring Networking for Virtual Machines**

Configure standard Kubernetes network objects for virtual machines and virtual machine-backed applications. Configure node networking to connect virtual machines and nodes to networks outside the cluster by using Multus CNI plug-ins and the NMState operator.

### **Configuring Storage for Virtual Machines**

Manage storage and disks for virtual machines in Red Hat OpenShift by using Kubernetes.

### **Migrating Virtual Machines to Red Hat OpenShift Virtualization**

Migrate virtual machines from a compatible hypervisor to Red Hat OpenShift Virtualization by using the migration toolkit for virtualization (MTV) operator and the Ansible Automation Platform (AAP) operator.
