

AI- Powered Analytics

Duration – 2 hours

Overview

Join us for an exciting and informative event on AI-Powered Analytics, where we delve into the innovative world of data analytics enhanced by artificial intelligence. This two-hour session is designed to provide you with valuable insights into the latest advancements in business intelligence, analytics with Power BI, and the transformative role of AI in data analytics.

Audience Profile

This course is designed for individuals seeking to explore the functionalities and capabilities of AI in Power BI. A basic understanding of data concepts and familiarity with Power BI would be beneficial. If you are interested in learning how to get started with copilot in Power bi, this course is ideal for you.

Key Discussion Points

1. Concept of Business Intelligence

Explore the fundamentals of business intelligence and how it empowers organizations to make data-driven decisions.

2. Analytics with Power BI

Discover the robust capabilities of Power BI, Microsoft's leading data visualization and business analytics tool, and learn how to harness its full potential.

3. Data Lifecycle in Power BI

Discover the data lifecycle in Power BI and its key stages. Begin by connecting data from various sources and the usage of Power Query Editor for transformations. Next, model your data and finally, design reports and dashboards using the modelled data

4. Copilot in Power BI

Get introduced to Copilot, an AI-powered assistant designed to streamline tasks and improve productivity in Power BI.

5. Copilot for Report Authors

Understand how Copilot assists report authors by automating report generation, providing natural language interfaces, and delivering real-time insights. Learn with a live demonstration where we will create a report using Copilot, showcasing its capabilities and ease of use.

6. Ask Questions from Copilot

Experience the interactive nature of Copilot by asking it questions and receiving instant, accurate responses to enhance your data analysis process.
