Manage Windows Endpoints with Microsoft Intune

Reference course: MD-102

Adapt your skills and master the tools you'll need to thrive in an AI-powered. Join us at Manage Windows Endpoints with Microsoft Intune to discover how to effectively manage your organization's endpoints and security policies. You'll learn how to streamline the management of identities, apps, and devices across Windows 11 and Windows 365, and discover how Microsoft Intune makes it easier to support your team.

Help boost your organization's innovation and productivity by exploring how Microsoft Surface devices, powered by Windows 11, deliver the complete Microsoft 365 experience. You'll also get a detailed look at the robust endpoint security made possible through the seamless combination of hardware, firmware, software, and identity protection.

Who should attend:

- IT pros
- End-user computing managers
- Endpoint managers

Technical level:

- This is an intermediate-level course.

During this training, you'll be able to:

- Discover how to protect and keep endpoints current with the latest OS and app updates.
- Explore how to create, manage, and enforce configuration policies for organization- and user-owned devices with Microsoft Intune.
- Take an in-depth look at what Microsoft Surface devices have to offer for security, deployment, and ease of management.
- Chat with Microsoft experts—ask questions and get answers on deploying Windows 11 and Windows 365.

Here's what you can expect:
