

# VMware NSX: Design

## Course Overview

This five-day course provides comprehensive training on considerations and practices to design a VMware NSX® environment as part of a software-defined data center strategy. This course prepares the student with the skills to lead the design of an NSX environment, including design principles, processes, and frameworks. The student gains a deeper understanding of the NSX architecture and how it can be used to create solutions to address the customer's business needs.

## Course Objectives

By the end of the course, you should be able to meet the following objectives:

- Describe and apply a design framework
