

MB-330: Conceptualize Supply Chain Management in Microsoft Dynamics 365

The Dynamics 365 Supply Chain Management functional consultant is a key resource that designs and configures the system to meet the requirements for a customer. The Supply Chain Management functional consultant implements product information management, sales and procurement processes, inventory & warehouse management, master planning, transportation management, and asset management. The functional consultant analyzes business requirements and translates those requirements into fully realized business processes and solutions that implement industry-recommended practices. They partner with architects, developers, consultants, and other stakeholders to deliver solutions that meet or exceed the needs of their customers.

Audience Prerequisites

Before attending this course, students should have:

- Basic understanding for supply chain management and manufacturing terminology
- Basic understanding of Dynamics 365 finance and operation app
