

UiPath Professional Specialized AI Professional (SAIv1)

Course Description:

The Specialized AI Professional Training is designed for Automation Developers aiming to integrate advanced AI capabilities into enterprise automation projects. This comprehensive learning plan provides deep, hands-on expertise in specialized AI areas including intelligent document processing, AI-powered data mining, and communications mining using UiPath Document Understanding, AI Center, and Communications Mining. The training prepares learners to independently build, deploy, and lead production-level AI-powered automations, directly supporting the attainment of the UiPath Certified Professional Specialized AI Professional (SAIv1) credential.

Audience Profile:

- Advanced Automation Developers
- Solution Architects
- Automation Architects
- Professionals seeking to master specialized AI integration in automation projects
- Individuals preparing to lead or design complex, cognitive automation solutions

Prerequisite:

- Completion of Automation Explorer, Automation Developer Associate, and Automation Developer Professional learning plans recommended
- Practical experience with UiPath Studio and automation concepts

Course Objective:

- Attain advanced, hands-on expertise using UiPath Document Understanding, AI Center, and Communications Mining
- Build and deploy robust, production-level automations harnessing AI, ML, and NLP technologies
- Design, train, and refine machine learning models for document and communications processing

- Analyze, extract, and monitor data from unstructured sources using communications mining
- Lead automation projects that infuse specialized AI capabilities
- Prepare for the UiPath Certified Professional Specialized AI Professional (SAIv1) certification

Table of Contents (TOC):

1. Introduction to AI and Specialized AI Professional Profile

- o Al concepts: generative AI, machine learning, NLP, specialized vs. generalist AI
- Role and capabilities of the Specialized AI Professional

2. **UiPath Al Center**

- Managing ML models with AI Center
- Integrating ML models with automation projects

3. **UiPath Document Understanding (Advanced)**

- Implementing Document Understanding framework activities
- Using out-of-the-box and custom ML extractors
- Training, refining, and deploying ML extractors
- Building end-to-end DU projects using process templates
- Active learning in modern DU projects

4. UiPath Communications Mining (Advanced)

- Communications Mining overview and updates
- Taxonomy design for unstructured data
- o Model training deep dive: setup, discover, explore, refine, and maintain
- o Analytics and monitoring with Communications Mining

5. Specialized Al Project Practice

o Real-world project building with document processing

 Building projects analyzing and extracting data from unstructured communications

6. Learning Plan Completion

- Assessment
- o Feedback Survey
- o Earning the Specialized AI Professional diploma and credential (SAIv1)
