

UiPath Specialized AI Associate (SAIAv1)

Course Description:

The Specialized AI Associate Training equips learners with core knowledge and skills in AI-powered automation using UiPath technologies. This course is designed to help you understand how artificial intelligence and process automation can transform businesses by integrating advanced components such as Document Understanding, Communication Mining, and AI Center into automation workflows. The training prepares candidates for the UiPath Certified Professional Specialized AI Associate (SAIAv1) certification, supporting the development of intelligent document processing (IDP) solutions and automation projects with AI features.

Audience Profile:

- Automation Developers seeking AI specialization
- Technical professionals aiming to incorporate AI in automation
- Individuals with experience or interest in Document Understanding and Communication Mining
- Professionals beginning their journey toward advanced roles in process automation and intelligent document processing

Prerequisite:

- Basic familiarity with UiPath Studio and automation concepts recommended
- Some exposure to Document Understanding and Communication Mining is helpful but not required

Course Objective:

- Develop foundational understanding of AI concepts and UiPath's AI-powered automation
- Build and manage automations integrating AI models and components
- Apply Document Understanding for intelligent document processing (IDP)
- Utilize Communication Mining for extracting insights from communications data
- Leverage AI Center and Integration Service to enhance automation solutions
- Prepare for the UiPath Certified Professional Specialized AI Associate (SAIAv1) credential

Table of Contents (TOC):

- 1. Introduction to Automation**
- 2. Introduction to AI-powered Automation**
- 3. Explore Automation Development with UiPath**
- 4. Build Your First Automation Process with Studio**
- 5. Variables, Constants, and Arguments in Studio**
- 6. Control Flow in Studio**
- 7. Data Manipulation with Strings, Lists, Dictionaries, and Data Tables in Studio**
- 8. Debugging in Studio**
- 9. Error and Exception Handling in Studio**
- 10. Email Automation with Studio**
- 11. Working with Local Files and Folders in Studio**
- 12. Version Control Systems Integration in Studio**
- 13. Orchestrator Overview for Automation Developers**
- 14. Working with Orchestrator Resources**
- 15. Project Organization in Studio**
- 16. Introduction to Logging in Studio**
- 17. Workflow Analyzer in Studio**
- 18. UiPath Automation Implementation Methodology Fundamentals**
- 19. UiPath Integration Service Overview**
- 20. Introduction to Specialized AI**
- 21. UiPath AI Center Overview**
- 22. UiPath Document Understanding Overview & Build a Document Understanding Automation in Studio**
- 23. UiPath Communications Mining Overview & Fundamentals of Model Training**
- 24. Completion and Diploma**
