

## Contents

### 1 Course Introduction

- About the Course 1-2
- Objectives 1-3
- Course Contents 1-4
- Hands-On 1-5

### 2 Troubleshooting Hardware and the Network

- Objectives 2-2
- Lesson Topics 2-3
- Topic: Troubleshooting Boot Issues 2-4
- Boot Management 2-5
- Boot Management – Boot Loader 2-6
- Boot Management – Boot Parameters 2-7
- Boot Management – Boot Flags 2-8
- Boot Process 2-9
- SBC Boot Process: 1 (Loading Bootloader, Boot Parameters) 2-10
- SBC Boot Process: 2 (Loading the SBC Boot Image, Checking Disk) 2-11
- SBC Boot Process: 3 (Crash Kernel, Detecting Media, Boot Flag, & Platform) 2-12
- SBC Boot Process: 4 (Starting Media, Application & Configuration) 2-13
- SBC Boot Process: 5 (Enabling Features & Media Interfaces) 2-15
- SBC Boot Process: 6 (Starting More Daemon Processes / Tasks) 2-16
- SBC Boot Process: 7 (Completing) 2-17
- Interrupting the Boot Process 2-18
- [Acme Boot]Prompt Options (1 of 2) 2-19
- [Acme Boot]Prompt Options (2 of 2) 2-20
- Where to find the Diagnostic Image File – <http://support.oracle.com> (1 of 2) 2-21
- Where to find the Diagnostic Image File – <http://support.oracle.com> (2 of 2) 2-22
- Booting the SBC from the Diagnostic Image 2-23
- Executing Diagnostics Testing (1 of 2) 2-24
- Executing Diagnostics Testing (2 of 2) 2-25
- Diagnostic Shell Commands 2-26
- Key Points on Diagnostics Image File 2-27
- Boot Process Issues 2-28
- Solutions to the Boot Issues (1 of 5) 2-29
- Solution 1: Boot Locally from Another Boot File (2 of 5) 2-30

Solution 2: Boot Externally from an FTP Server (3 of 5)	2-31
Solution 3: Choose option l from the Acme Boot prompt* (4 of 5)	2-32
Solution 4: Choose option d from the Acme Boot prompt* (5 of 5)	2-33
Practice	2-34
Topic: Troubleshooting Hardware and Network Issues	2-35
What to Do with Hardware Failures?	2-36
Hardware and Environmental Faults	2-37
Hardware Temperature, Fan Speed & Environmental Sensor Alarm	2-38
Power Supply Alarms	2-39
Voltage Alarms	2-40
Layer 2 Connectivity – ARP Functionality	2-41
show arp	2-42
arp-add / arp-delete	2-44
Layer 3 – Network Layer	2-46
Are There Layer 3 Issues?	2-47
Enabling Management Protocols	2-48
Enabling Management Protocols - GUI	2-49
Interfaces Status Check – ACLI	2-50
Interfaces Status Check - GUI	2-51
How Is the Management Traffic Routed? (1 of 2)	2-52
How Is the Management Traffic Routed? (2 of 2)	2-53
show route-stats	2-54
Practice	2-55
Topic: Troubleshooting the SBC System Issues	2-56
View the Basic Information About This SBC	2-57
View the Basic Information About This SBC (1 of 3)	2-58
View the Basic Information About This SBC (2 of 3)	2-59
View the Basic Information About This SBC (3 of 3)	2-60
View Features on the SBC	2-61
System Fault Statistics	2-62
show uptime	2-63
show system-state	2-64
What Is The Current CPU Usage?	2-65
What Is The Current Memory Usage?	2-66
Application Memory Usage Statistics	2-67
Viewing Buffer Statistics	2-68
License Capacity	2-69
Performance Management	2-70
System Time	2-71
Configuring NTP	2-72
Verifying NTP Server & Status	2-73

- Platform Information 2-74
  - show platform 2-75
  - show platform health-check 2-76
  - show platform limits 2-77
  - show platform health-check 2-78
  - show platform cpu & show platform cpu-load 2-79
  - show platform memory 2-80
- Viewing Active Processes 2-81
- Realtime CPU Usage 2-82
- Checking Remaining Diskspace 2-83
- Practice 2-84
- Summary 2-85

### **3 SBC Review**

- Objectives 3-2
- Topics 3-3
  - Topic: SBC Signaling Review 3-4
  - What Is a Realm? 3-5
  - Configuration Elements View 3-6
  - Media Packets Path (Conceptual View) 3-7
    - The sip-config Element 3-9
  - SIP Edge Proxy Function 3-10
  - Edge Proxy – sip-interface 3-11
  - Configuring sip-interface Element 3-12
  - Policy-Based Realm Bridging (PBRB) in Peering Environment 3-13
  - Policy-Based Routing on the SBC 3-14
  - Routing Decision 3-15
  - local-policy Element Key Configuration 3-16
  - Session Agent: General 3-17
  - Example of session-agents 3-18
    - Configuring The session-agent Element 3-19
  - session-group (SAG) 3-20
    - Configuring The session-group Element 3-21
- Topic: SBC Media Review 3-22
  - Media Processing Requirements 3-23
    - The media-manager-config Element 3-24
  - Media Proxy Function 3-25
  - The steering-pool Configuration Element 3-26
  - Configuring steering-pool Element 3-27
  - Media Establishment on the SBC 3-28
  - Media Packets Path (Conceptual View) 3-29

Topic: SBC Configuration Review 3-30  
Key Configuration Elements 3-31  
Relations of Configuration Elements 3-32  
Configuration Element 3-33  
Practice 3-34  
Summary 3-35

## **4 Troubleshooting Tools**

Objectives 4-2  
Topics 4-3  
Topic: Overview 4-4  
Management Architecture 4-5  
Data and Interfaces for Troubleshooting 4-6  
Troubleshooting Methodology 4-7  
What to Check Before Troubleshooting? 4-8  
Topic: Using the Alarm System and Syslog 4-9  
What Are Events on the SBC? (1 of 2) 4-10  
What Are Events on the SBC? (2 of 2) 4-11  
What Are Alarms in the SBC? 4-12  
The Alarm System in the SBC 4-14  
How Does the SBC Report Alarms? 4-15  
How to Clear the Alarms 4-16  
What Is the System Log on the SBC? 4-17  
System Log Events (Syslog Configuration) 4-18  
Example: acmelog Entries 4-20  
Practice 4-21  
Topic: Using SNMP 4-22  
Overview of SNMP on the SBC 4-23  
Enabling the SBC for SNMP v1 and v2 4-24  
Enabling the SBC for SNMP v3 4-26  
Enabling the SBC for SNMP v3 (GUI VIEW) 4-29  
Key Points on SNMP on the SBC 4-30  
How to Use the SNMP Data 4-32  
Common SNMP Traps 4-33  
Example: SNMP Traps in Wireshark 4-34  
Example: SNMP Traps in Trap Receiver 4-35  
SNMP Query for Monitoring 4-36  
Example: How Is the SBC Performance? 4-38  
Example: What Interfaces Are Available? 4-39  
Example: What Are the Session-Related Statistics? 4-40  
What If SNMP Queries Fail? 4-41

What If SNMP Queries Still Fail?	4-42
Problem Sending/Receiving SNMP Traps?	4-43
Example: Troubleshooting with SNMP	4-44
Practice	4-45
Topic: Using the SBC Logging Functions and Log Files	4-46
Logs on the SBC	4-47
How to View Log Files	4-48
Example: sipmsg.log	4-49
How to Enable Logging	4-50
How Much to Log in the Process Logs	4-52
How to View Log Levels of a Process	4-53
Example: log.sipd with Debug Log Level	4-55
Example: log.sipd for Routing	4-56
How to Start a New Log File	4-57
How to Archive/Package Logs	4-58
How to Stream Logs off the SBC	4-59
Logging Versus System Performance	4-60
Practice	4-61
Topic: Packet Trace	4-62
What Is Packet Trace on the SBC?	4-63
How to Trace Packets Through the SBC (Remote)	4-64
How to Start/Stop Packet Trace (Remote)	4-65
How to Trace Packets on the SBC (Local)	4-67
What to Look for in the Packet Trace	4-68
SIP Monitor and Trace via E-SBC GUI	4-69
Accessing SIP Monitor and Trace	4-70
Enabling SIP Monitor and Trace	4-71
Using Dynamic filters for Monitor and Trace	4-72
Monitoring Notable Events	4-74
Configuring Notable Events Monitoring	4-75
Practice	4-76
Topic: Using Call Detail Records (CDRs)	4-77
Overview of CDRs on the SBC	4-78
Enabling CDR on the SBC – Global Configuration	4-79
Enabling CDR on the SBC – Storing CDRs on the SBC	4-82
Enabling CDR on the SBC – Storing CDRs on a Hard Drive	4-84
Enabling CDR on the SBC – Adding RADIUS Servers	4-85
Enabling CDR on the SBC – FTP/SFTP Server Configuration	4-86
Enabling CDR on the SBC – Realm Configuration	4-88
Key Points on CDR Configurations	4-89
CDR Output: RADIUS vs CSV	4-90

How to Use the Data in CDRs	4-91
Monitoring CDRs – Accounting Status	4-92
Monitoring CDRs – Accounting Server Stats	4-93
Monitoring CDRs – CDR Push Receiver Stats	4-94
What to Consider When CDR Fails	4-95
Example: Troubleshooting CDR Failures with Log Files	4-96
Example: Troubleshooting Using CDRs	4-97
Practice	4-98
Topic: Using Historical Data Recording (HDR)	4-99
Historical Data Recording (HDR)	4-100
HDR Groups	4-101
HDR – Things to Know	4-104
Configuring HDR: Setting Global Collection	4-105
Configuring HDR: Setting Push Receivers and Group Settings	4-106
Sending HDRs to an SFTP Server	4-107
ACLI Commands for HDR	4-110
Example: HDR Information from SNMP Statistics	4-111
Example: HDR Information from ACLI Statistics	4-112
Troubleshooting HDR – 1 of 3	4-113
Troubleshooting HDR – 2 of 3	4-114
Troubleshooting HDR – 3 of 3	4-115
Troubleshooting HDR – Example	4-116
Practice	4-117
Topic: What to include in a Support Ticket	4-118
General SBC Troubleshooting Approach	4-119
Opening a Support Ticket – What to Include	4-121
My Oracle Support	4-122
Emergency Response	4-123
Collecting System Information with show support-info	4-124
System Crash	4-125
What else to include	4-127
Summary	4-128

## **5 Troubleshooting Signaling**

Objectives	5-2
Topics	5-3
Topic: Monitoring and Troubleshooting Signaling Using Statistics	5-4
The show and display Commands	5-6
The Commands for Application Statistics	5-7
Format of show sipd <method> Output	5-8
Example: show sipd invite	5-9

Format of the show sipd <non-method> Output	5-10
The Measurement Window	5-11
Format of the show mbcd <transaction> Output	5-12
What SIP Interfaces Are There?	5-13
Is the SIP Packet Sent to the SIPD task?	5-14
What Is the Architecture Configured in the SBC?	5-16
What Are the Statistics per Realm?	5-17
How Are the INVITE Transactions on a Particular Realm?	5-18
What Are the Active Session Statistics?	5-19
What Are the Active SIP Session Statistics?	5-21
Clearing Active SIP Session?	5-28
monitor session - What Are the Runtime SIP Session Statistics?	5-29
Are There Any sipd Errors or Events?	5-30
Are There Dropped Packets - ACLI?	5-31
Are There Dropped Packets - GUI?	5-32
Are There Dropped Packets - ACLI?	5-33
Are There Dropped Packets - GUI?	5-34
Practice	5-35
Topic: Troubleshooting Policy-Based Routing	5-36
Routing Option: Routing Based on Time of Day?	5-37
Routing Option: Routing Based on SIP Method?	5-38
Routing Option: Routing Based on Cost?	5-39
Routing Option: Routing Based on Codec?	5-40
Routing Option: Routing Based on To Header or Request-URI?	5-41
How Do You View Local Policy Statistics - ACLI?	5-42
How Do You View Local Policy Statistics - GUI?	5-43
Examples of Local-Policy Configuration Issues	5-44
Examples of Routing Issues	5-45
No Local Policy Match Found	5-46
An Unintended Route Is Selected	5-47
Retransmissions	5-48
Topic: Troubleshooting Session Agents	5-49
Session Agent Constraints	5-50
Session Agent Constraints Configuration	5-51
Constraints on a Specific SIP Method	5-54
Key Points on the Rates	5-55
Key Points on the Rate Calculations	5-56
Key Points on the Rate Windows	5-57
Example: Burst and Sustain Rate	5-58
Monitoring Session Agent	5-59
Troubleshooting the 503 Response	5-61

Practice 5-62

Topic: Troubleshooting Registration Issues (Access/Backbone Environment) 5-63

ACL Commands for Monitoring Registrations 5-64

How Are the REGISTER Transactions on the Entire SBC? 5-65

How Are the REGISTER Transactions on a Particular Realm? 5-66

How Are SIP Registrations? 5-67

Is Registration of an EP Cached in the SBC? 5-68

How Do You Sort Registration Cache Entries? 5-69

How Do You Clear Registration Cache? 5-71

Common Registration Issues 5-72

Issue: Registration Cache Priority for Routing 5-73

Issue: EP Registered, but Can't Make Calls 5-74

Issue: Registration Overload 5-75

Example: Registration Overload 5-76

Issue: CPU Overload 5-77

Issue: CPU Overload – Data to Collect 5-78

Example: Data to Collect 5-79

Issue: CPU Overload – Cause and Solutions 5-80

Practice 5-81

Summary 5-82

## **6 Troubleshooting Media**

Objectives 6-2

Topics 6-3

Topic: Basic Media Concepts 6-4

Media Flow (Conceptual View) 6-5

Media Flow 6-6

Media Timers 6-7

Media Timers Configuration 6-8

NAT Entries in the Lookup Table 6-9

Example: NAT Entry 6-10

Correlation of Media Timers 6-11

What Does the init Timer Tell You? 6-12

What Does the subsq Timer Tell You? 6-14

What Does the max Timer Tell You? 6-16

Timer Sweeps 6-17

Example: Media Timers in the Lookup Table Call-on-Hold 6-18

Example: Media Timers in the Lookup Table Call with Media Issues 6-19

Practice 6-20

Topic: How NAT Entries Are Built 6-21

How Many Flows for a Single SIP Call? 6-22

What NAT Entries Are in the Lookup Table? 6-23  
How Are the NAT Entries Filled? 6-24  
Summary of NAT Entries 6-27  
Practice 6-28  
Topic: Middle Box Control Daemon (MBCD) 6-29  
MBCD Overview 6-30  
MBCD Terminology 6-31  
Media Offer/Answer Process Flow 6-32  
Example: SIP INVITE and MIBOCO Transaction 6-34  
Viewing MBCD Transactions 6-35  
Viewing MBCD Errors 6-37  
Practice 6-38  
Topic: Troubleshooting Media Issues 6-39  
Challenges of Troubleshooting in Production Environments 6-40  
Questions to Ask When Media Problems Occur 6-41  
Information to Gather When Troubleshooting Media 6-43  
show mbcid realms 6-44  
monitor media command – Real Time Statistics 6-45  
Summaries of the show nat Command 6-46  
show nat flow-info by-addr 6-47  
Example: Troubleshooting One-Way Audio 6-48  
Example: Troubleshooting Call-on-Hold 6-51  
Practice 6-52  
Summary 6-53

## **7 Troubleshooting High Availability**

Objectives 7-2  
Topics 7-4  
Topic: HA Overview 7-5  
Virtual HA Addressing 7-6  
Physical HA Addressing 7-7  
High Availability Process 7-8  
BERPd Engine 7-9  
wancom Communications 7-10  
BERPd Advertisements 7-11  
Topic: Checkpointing 7-12  
HA Checkpointing 7-13  
State Checkpointing Operation – Journal Entries 7-14  
Configuration Checkpointing 7-15  
Configuring Checkpointing Parameters 7-16  
Example: Configuration Checkpointing 7-17

Signaling Synchronization	7-18
Example: Configuration Checkpointing	7-19
Media Checkpointing	7-20
Media Checkpointing Parameters	7-21
Example: Media Checkpointing	7-22
Topic: HA States and State Transitions	7-23
BERPd Machine States	7-24
Boot Actions of HA Peer	7-25
Node State Transitions	7-26
Topic: HA Operations	7-27
Events Triggering Switchover	7-28
Loss of Heartbeat Switchover	7-29
Physical HA Addressing	7-30
HA Media Interface Keep Alive	7-31
Alarming Subsystem	7-32
Alarm Reporting	7-33
Process Watchdog	7-34
Topic: HA Connectivity	7-35
Media Interface Link Detection and Gateway Polling	7-36
Expanded Gateway Polling	7-38
HA Geographic Redundancy	7-39
HA Parameter Adjustments	7-40
Summary	7-42
