

KOENIG SOLUTIONS • COURSE OUTLINE

Microsoft Azure IoT Developer

Learn to design, build and secure IoT solutions on Azure, from device provisioning and edge deployment to analytics and monitoring.

11

MODULES

77

TOPICS

21

HANDS-ON LABS

COURSE OVERVIEW

This course covers the Azure IoT reference architecture and core Azure IoT services, followed by configuring device communication, secure provisioning at scale, and message processing with Stream Analytics. It then addresses business integration and data visualisation through Logic Apps, Event Grid, Time Series Insights and Power BI, before moving into Azure IoT Edge deployment, custom edge modules and containers. Later modules cover device management, solution testing and diagnostics, security with Azure Security Center for IoT, and building solutions with Azure IoT Central.

WHO THIS COURSE IS FOR

IoT Developers

Solution Architects

Cloud Developers

DevOps Engineers

Embedded Systems Engineers

LEARNING OBJECTIVES

- Explain the Azure IoT reference architecture and core IoT services
- Configure secure two-way communication between IoT Hub and devices
- Implement device provisioning with the Device Provisioning Service
- Configure message and event routing and Azure Stream Analytics queries
- Develop business integration using Logic Apps, Event Grid and Power BI
- Deploy custom modules to Azure IoT Edge devices
- Implement device management using device twins and direct methods
- Configure Azure Security Center for IoT to protect a solution

11 Modules, 77 Topics

01

2 Labs

Introduction to IoT and Azure IoT Services

In this module, students will begin by examining the business considerations for various IoT implementations and reviewing how the Azure IoT Reference Architecture supports IoT solutions. This module also provides students with an overview of the Azure services commonly used in an IoT solution and provides an introduction to the Azure portal.

LESSONS

- Business Opportunities for IoT
- Introduction to IoT Solution Architecture
- IoT Hardware and Cloud Services
- Lab Scenarios for this Course

AFTER COMPLETING THIS MODULE, STUDENTS WILL BE ABLE TO

- Explain how IoT and Azure IoT could be applied to their business
- Describe the core components of an Azure IoT Solution Architecture
- Describe the Azure IoT Services and how they relate to an IoT solution
- Create an Azure account and use the Azure portal to create an IoT Hub and DPS service

02

2 Labs

Devices and Device Communication

In this module, students will take a closer look at the Azure IoT Hub service and will learn how to configure secure two-way communication between IoT hub and devices. Students will also be introduced to IoT Hub features such as Device Twins and IoT Hub Endpoints that will be explored in more depth as the course continues.

LESSONS

- IoT Hub and Devices
- IoT Developer Tools
- Device Configuration and Communication

AFTER COMPLETING THIS MODULE, STUDENTS WILL BE ABLE TO

- Explain the core features of the IoT Hub services
- Describe the lifecycle of an Azure IoT device
- Describe how IoT Hub manages device identities and implements other security features
- Register devices with the IoT Hub using the Azure portal, Azure CLI, and Visual Studio Code
- Implement the IoT Hub Device and Service SDKs

Device Provisioning at Scale

In this module, students will focus on device provisioning and how to configure and manage the Azure Device Provisioning Service. Students will learn about the enrollment process, auto-provisioning and re-provisioning, disenrollment, and how to implement various attestation mechanisms.

LESSONS

- Device Provisioning Service Terms and Concepts
- Configure and Manage the Device Provisioning Service
- Device Provisioning Tasks

AFTER COMPLETING THIS MODULE, STUDENTS WILL BE ABLE TO

- Explain the process of device provisioning and the features of the Device Provisioning Service
- Explain the security considerations associated with device provisioning and how they are managed
- Implement the Device Provisioning Service SDKs
- Manage the device enrollment process, including deprovisioning and disenrollment

Message Processing and Analytics

In this module, students will examine how IoT Hub and other Azure services can be used to process messages. Students will begin with an investigation of how to configure message and event routing and how to implement routing to built-in and custom endpoints. Students will learn about some of the Azure storage options that are common for IoT solutions. To round out this module, students will implement Azure Stream Analytics and queries for a number of ASA patterns.

LESSONS

- Messages and Message Processing
- Data Storage Options
- Azure Stream Analytics

AFTER COMPLETING THIS MODULE, STUDENTS WILL BE ABLE TO

- Configure message and event routing
- Route data to the built-in and custom endpoints
- Implement message enrichment
- Implement Azure Stream Analytics Inputs, Queries, and Outputs
- Store message data in a warm storage for historical purposes and additional analysis
- Use an Azure Function within a message processing and analytics solution

Insights and Business Integration

In this module, students will learn about the Azure services and other Microsoft tools that can be used to generate business insights and enable business integration. Students will implement Azure Logic Apps and Event Grid, and they will configure the connection and data transformations for data visualization tools such as Time Series Insights and Power BI.

LESSONS

- Business Integration for IoT Solutions
- Data Visualization with Time Series Insights
- Data Visualization with Power BI

AFTER COMPLETING THIS MODULE, STUDENTS WILL BE ABLE TO

- Explain the options for business integration within an IoT solution and how to achieve them
- Develop business integration support using Logic Apps and Event Grid
- Configure IoT Data for Visualization in Time Series Insights
- Configure IoT Data for Visualization in Power BI

Azure IoT Edge Deployment Process

In this module, students will learn how to deploy a module to an Azure IoT Edge device. Students will also learn how to configure and use an IoT Edge device as a gateway device.

LESSONS

- Introduction to Azure IoT Edge
- Edge Deployment Process
- Edge Gateway Devices

AFTER COMPLETING THIS MODULE, STUDENTS WILL BE ABLE TO

- Describe the difference between an IoT device and an IoT Edge device
- Configure an IoT Edge device
- Implement an IoT Edge deployment using a deployment manifest
- Configure an IoT Edge device as a gateway device

Azure IoT Edge Modules and Containers

In this module, students will develop and deploy custom edge modules, and will implement support for an offline scenario that relies on local storage. Students will use Visual Studio Code to build custom modules as containers using a supported container engine.

LESSONS

- Develop Custom Edge Modules
- Offline and Local Storage

AFTER COMPLETING THIS MODULE, STUDENTS WILL BE ABLE TO

- Explain the requirements for building a custom edge module
- Configure Visual Studio Code for developing containerized modules
- Deploy a custom module to an IoT Edge device
- Implement local storage on an IoT Edge device in support of an offline scenario

Device Management

In this module, students will learn how to implement device management for their IoT solution. Students will develop device management solutions that use device twins and solutions that use direct methods.

LESSONS

- Introduction to IoT Device Management
- Manage IoT and IoT Edge Devices
- Device Management at Scale

AFTER COMPLETING THIS MODULE, STUDENTS WILL BE ABLE TO

- Describe the most common device management patterns and configuration best practices
- Describe when and how to use device twins and direct methods to implement device management
- Implement device management for various patterns using device twins and direct methods
- Implement device management at scale using automatic device management and jobs

Solution Testing, Diagnostics, and Logging

In this module, students will configure logging and diagnostic tools that help developers to test their IoT solution. Students will use IoT Hub and Azure Monitor to configure alerts and track conditions such as device connection state that can be used to troubleshoot issues.

LESSONS

- Monitoring and Logging
- Troubleshooting

AFTER COMPLETING THIS MODULE, STUDENTS WILL BE ABLE TO

- Describe the options for monitoring and logging an Azure IoT solution
- Configure Azure Monitor to support of an IoT solution
- Configure IoT Hub Metrics to support of an IoT solution
- Implement diagnostics logging
- Troubleshoot IoT device connection and communication issues

Azure Security Center and IoT Security Considerations

In this module, students will examine the security considerations that apply to an IoT solution. Students will begin by investigating security as it applies to the solution architecture and best practices, and then look at how Azure Security Center for IoT supports device deployment and IoT Hub integration. Students then use Azure Security Center for IoT Agents to enhance the security of their solution.

LESSONS

- Security Fundamentals for IoT Solutions
- Introduction to Azure Security Center for IoT
- Enhance Protection with Azure Security Center for IoT Agents

AFTER COMPLETING THIS MODULE, STUDENTS WILL BE ABLE TO

- Describe security concerns and best practices for an IoT solution
- Describe the Azure IoT Security Architecture and Threat Modeling
- Describe the features and support provided by Azure Security Center for IoT
- Configure Security Agents and Security Module Twins
- Aggregate Azure Security Center for IoT Events

Build an IoT Solution with IoT Central

In this module, students will learn how to configure and implement Azure IoT Central as a SaaS solution for IoT. Students will begin with a high-level investigation of IoT Central and how it works. With a basic understanding of IoT Central established, students will move on to creating and managing device templates, and then managing devices in their IoT Central application.

LESSONS

Introduction to IoT Central · Create and Manage Device Templates · Manage Devices in Azure IoT Central

HANDS-ON LABS

Practise What You Learn

#	MODULE	ACTIVITY
01	Introduction to IoT and Azure IoT Services	■ Getting Started with Azure ■ Setting Started with Azure IoT Services
02	Devices and Device Communication	■ Setup the Development Environment ■ Connect IoT Device to Azure
03	Device Provisioning at Scale	■ Individual Enrollment of Devices in DPS ■ Automatic Enrollment of Devices in DPS
04	Message Processing and Analytics	■ Device Message Routing ■ Filtering and Aggregating Message Data
05	Insights and Business Integration	■ Integrate IoT Hub with Event Grid ■ Explore and Analyze Time Stamped Data with Time Series Insights
06	Azure IoT Edge Deployment Process	■ Introduction to IoT Edge ■ Set Up an IoT Edge Gateway
07	Azure IoT Edge Modules and Containers	■ Develop, Deploy, and Debug a Custom Module on Azure IoT Edge ■ Run an IoT Edge Device in Restricted Network and Offline
08	Device Management	■ Remotely Monitor and Control Devices with Azure IoT Hub ■ Automatic Device Management
09	Solution Testing, Diagnostics, and Logging	■ Configure Metrics and Logs in Azure IoT Hub ■ Monitor and Debug Connection Failures
10	Azure Security Center and IoT Security Considerations	Implementing Azure Security Center for IoT
11	Build an IoT Solution with IoT Central	■ Get Started with Azure IoT Central ■ Implementing IoT Solutions with Azure IoT Central

WHAT IS INCLUDED

Everything You Need to Succeed

- Koenig course material for every module
- Delivery by certified instructors and subject matter experts
- Hands-on exercises throughout the course
- Course completion certificate from Koenig

ABOUT KOENIG

Who We Are

Established in 1993, Koenig Solutions is a globally recognised training provider with 35+ technology partnerships, 5,000+ training programmes and a network of certified instructors and subject matter experts, supporting individuals and enterprise teams worldwide.
