COURSE OVERVIEW

This course covers planning a Power Pages project and exploring the platform before building sites from templates using the design studio, pages, navigation and components. It then addresses data modelling with Dataverse, including tables, forms and multistep forms. It continues with extending portal pages through code view, web and page templates, the Power Pages Web API, code components, Liquid and Power Automate integration. It closes with site administration, covering identity providers, permissions, security roles, invitations and the configuration migration tool.
